## GENERAL INTRODUCTION – PRODUCT DESCRIPTION

The GEM modular fire-fighting pressure boosters are built in conformity with EN 12845 for automatic sprinkler systems and with UNI 10779 for hydrant systems.

In accordance with the above standards, all the main components of the single-pump booster set are factory connected and assembled.

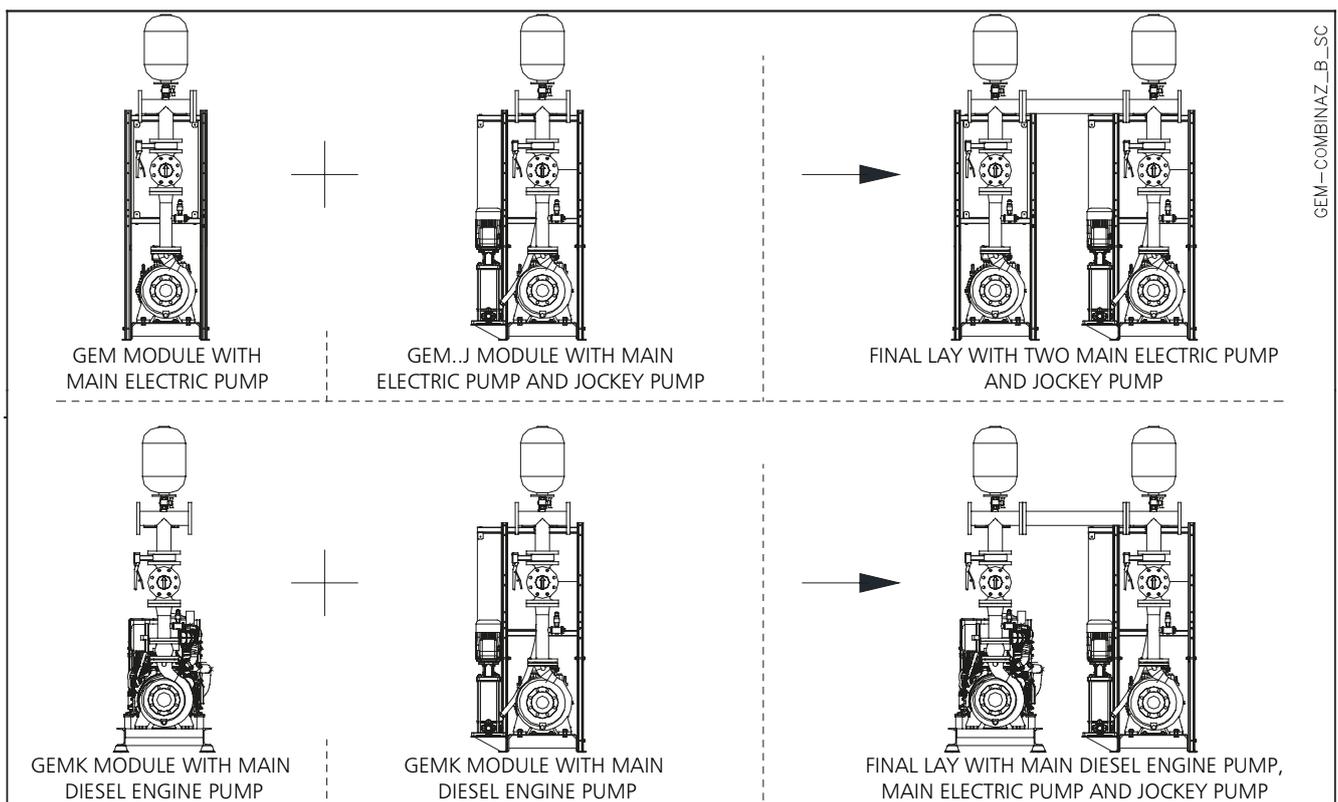

The configuration of the module, intended as a single unit, always comprises the pump and varies according to the required type of motor or engine (electric or diesel).

If modules are combined, the water supplies described in EN12845 can be obtained for the fire-fighting system in question. These water supplies can be single, superior, duplicated or combined. Fire-fighting sets are generally fitted with two main service pumps, one backing up the other. The diameter of the connection pipe is chosen considering only one operating pump; the second one serves as a backup (10.2 EN 12845). The choice of electric motors or diesel engines depends on the level of reliability required from the system. Point 10.2 of EN 12845 states that for superior or duplicate water supplies, and if more than one pump is installed, no more than one service pump can be driven by the electric motor. This concept means that most installations always comprise at least one diesel pump backing up the main electric pump.

The Lowara GEM fire-fighting booster modules are complete units and comprise the range of base-connector horizontal pumps, thus assuring an extensive choice depending on system requirements and the contents of the above standards. The GEM modular fire-fighting sets comprise:

- End-suction horizontal electric pump complete with hydraulic components and control panel.
- End-suction horizontal electric pump complete with jockey pump connected to the base of the electric pump, hydraulic components and control panels.
- Diesel engine pump with end-suction hydraulic pump complete with hydraulic components, control panel and fuel tank.

The above three modules can be combined in order to reproduce the configuration required for the fire-fighting system water supply.

## GENERAL INTRODUCTION – PRODUCT DESCRIPTION

Il modulo base è completato con i seguenti componenti principali:

- On the discharge side of the service pump there is an on-off valve, a check valve and a tap for connection to the priming circuit for suction lift installations. Moreover, if the service pump works with a closed discharge line, a water recirculation cycle is performed in order to prevent the pump from overheating.
- Two pressure switches for the service pump (if the first fails, the second repeats permission for the pump to start).
- System connection via a threaded or flanged "TEE".
- Single base to which the service pump is fitted.
- Control panel bracket.

To complete the pump modules as required by the standard and to combine the various modules, the following accessories are available :

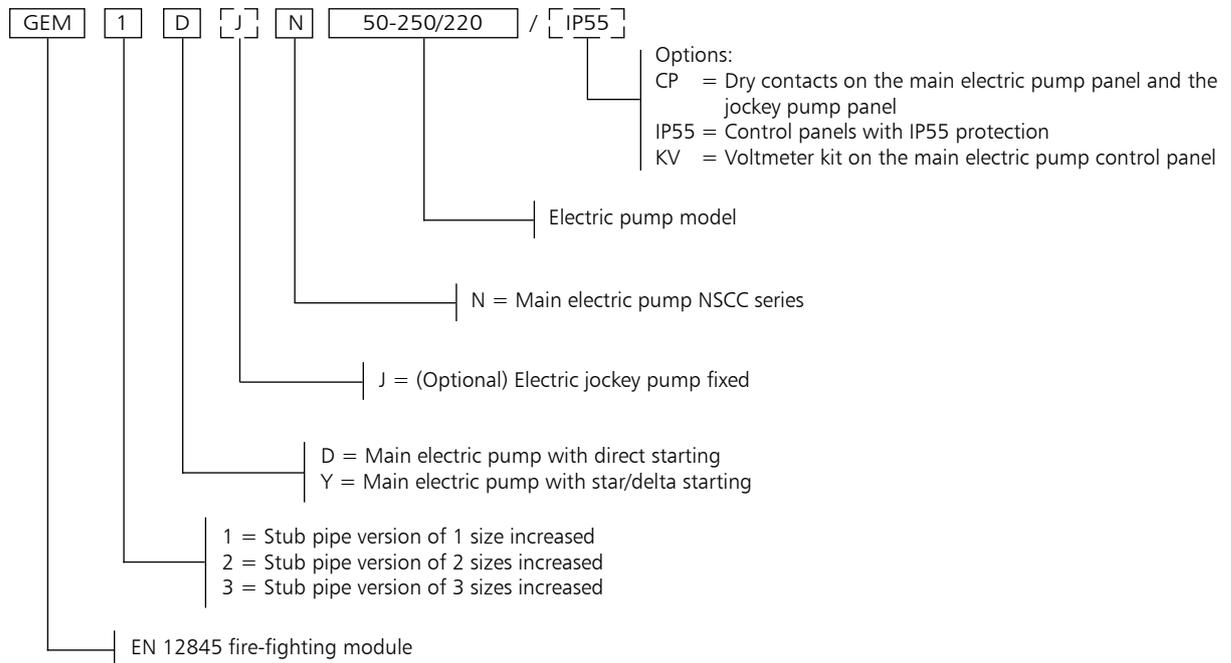

- Threaded connector kit comprising a threaded stub pipe.
- Flanged connector kit comprising a flanged stub pipe.
- Suction kit.
- Flow meter kit.
- Priming tank.
- Priming tank accessory kit.
- Electric jockey pump kit.
- On/off butterfly valve micro kit
- QAL12845.
- Multi-QAL 12845 kit.
- GSM module kit.
- Q-2RILS 485 control panel.
- Dry-running safety kit.
- Membrane vessels.
- Counterflange kit.
- Kit of universal brackets for control panels.
- Diesel supplementary catch basin kit.
- Set of spare parts for diesel engines.
- Fuel discharge valve kit.

The Customer can thus build the fire-fighting set according to UNI EN 12845 by simply summing the required modules.

E.g. to obtain a set comprising a main electric pump + jockey pump + backup diesel engine pump, 1 main electric pump module with jockey pump (GEM..J) + 1 diesel engine pump module (GEMK..) must be ordered + connector kit (threaded or flanged depending on the type of pump).

## MODULE IDENTIFICATION CODE

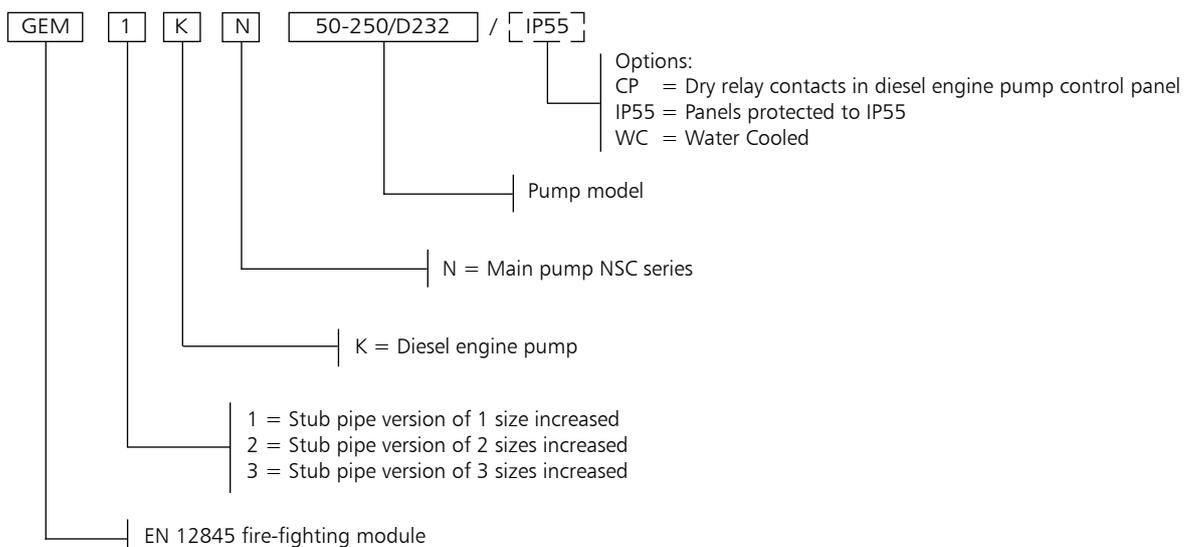

### EN 12845 MODULE WITH MAIN ELECTRIC PUMP

#### EXAMPLES:

- GEM1YN80-250/450: EN12845 version GEM1 fire-fighting module, comprising a main electric pump NSCC series model 80 250/450, with star/delta starting.
- GEM2DJN40-200/75: EN12845 version GEM2 fire-fighting module, comprising a main electric pump NSCC series model 40-200/75, with direct starting; with electric jockey pump fixed.
- GEM3DN65-250/300: EN12845 version GEM3 fire-fighting module, comprising a main electric pump NSCC series model 65 250/300, with direct starting.

### EN 12845 MODULE WITH MAIN DIESEL ENGINE PUMP

#### EXAMPLES:

- GEM1KN40-200/D199: EN12845 version GEM1 fire-fighting module comprising an NSC diesel engine pump model 40-200/D199.
- GEM2KN80-250/D241/WC: EN12845 version GEM2 fire-fighting module comprising an NSC diesel engine pump model 80-250/D241, water cooled engine.
- GEM3KN65-250/D243: EN12845 version GEM3 fire-fighting module comprising an NSC diesel engine pump model 65-250/D243.

## GEM VERSION MODULE

The maximum speed of water through the valve installed in the discharge side of the pump should not exceed the limit specified in Point 13.2.3 of EN 12845 Standard of 6 m/s. For this reason you can choose, increasing the flow, between versions GEM1, GEM2 or GEM3. Increasing the diameter decreases the speed of water and decreases the pressure drops for the benefit of performance of the pressure module. The accessories have appropriate dimensions depending on the version chosen. For selection and dimensional details, see accessories section. With version GEM2, for example, the diameter DN of the components after the diverging pipe is equal to DN+2 to the diameter of the delivery outlet of the pump.

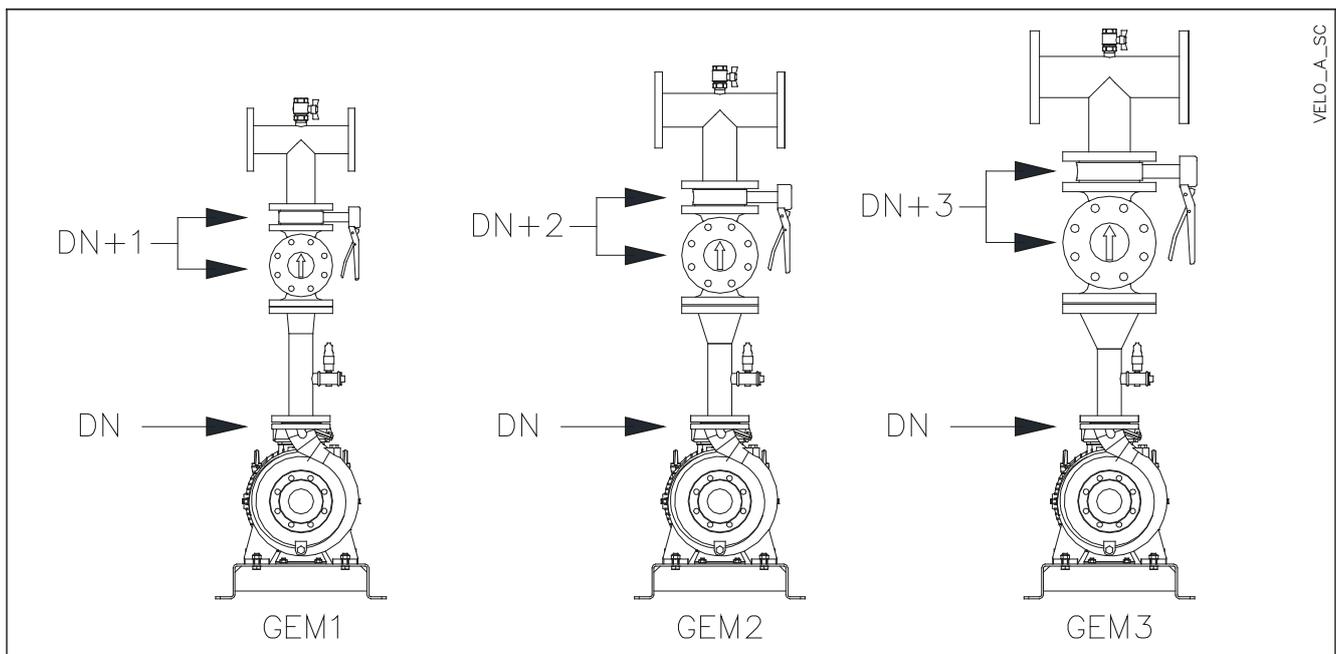

Example:

GEM2YN50-250/300 Module:

diameter of delivery outlet of the pump is DN50, diameter of on/off butterfly valve and non-return valve are DN80.

GEM3KN65-250/D243 Module:

diameter of delivery outlet of the pump is DN65, diameter of on/off butterfly valve and non-return valve are DN125.

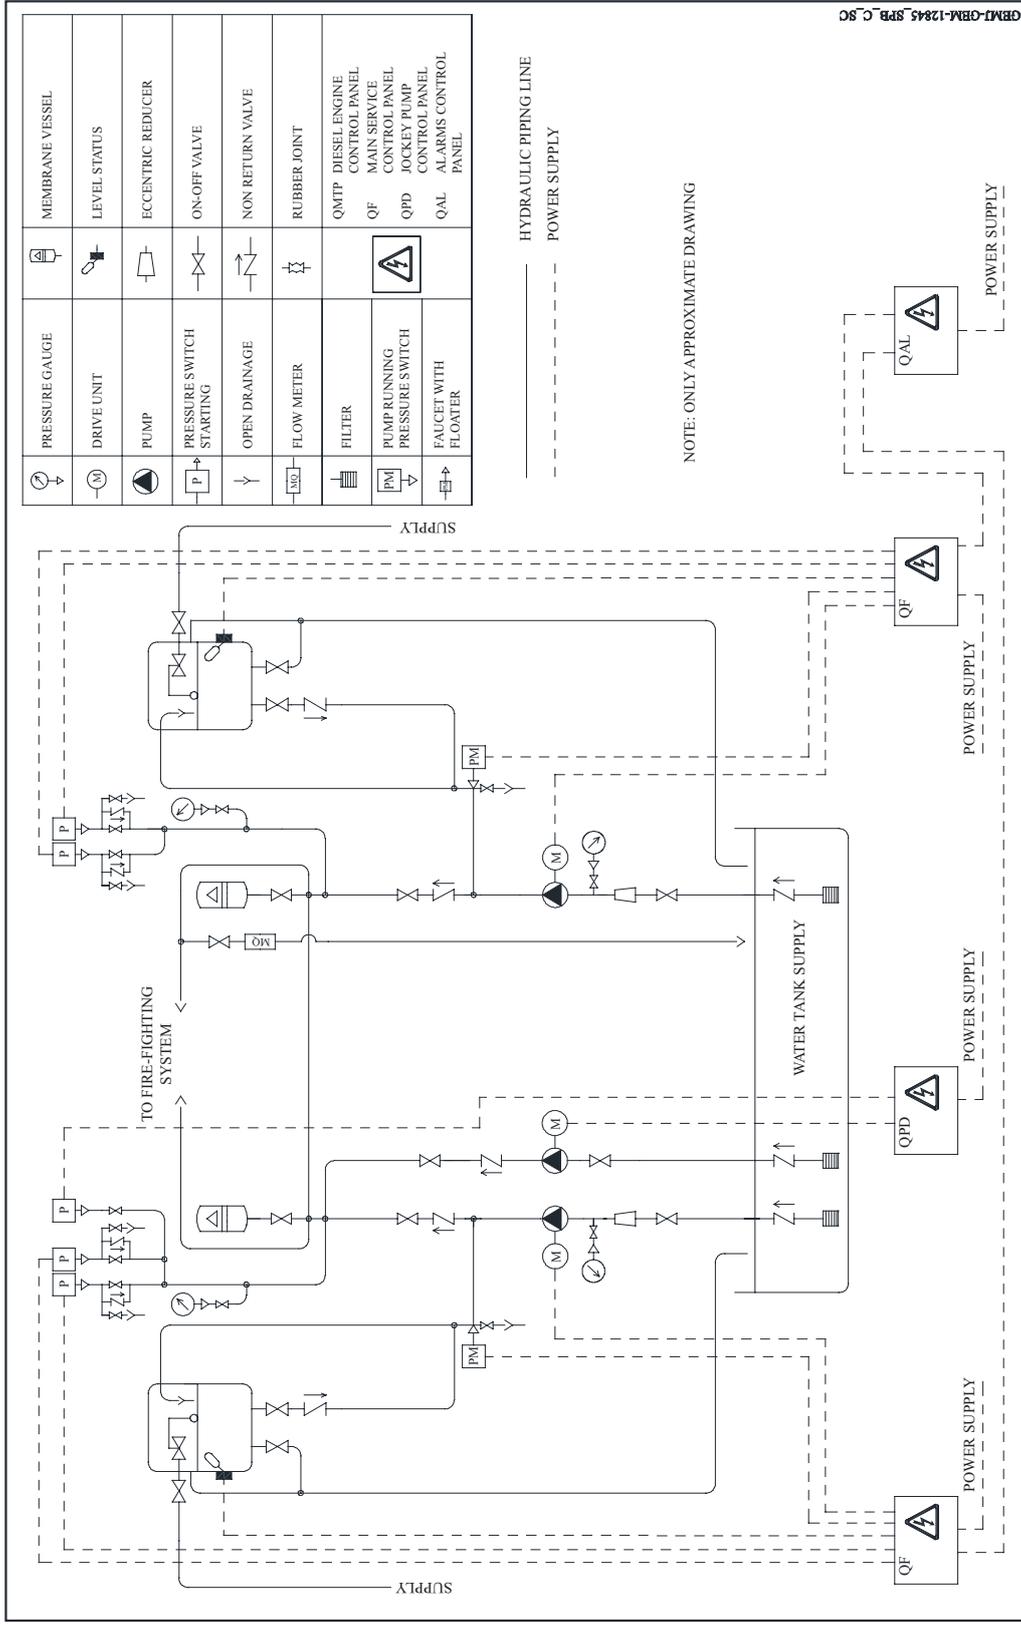

## REFERENCE REGULATIONS

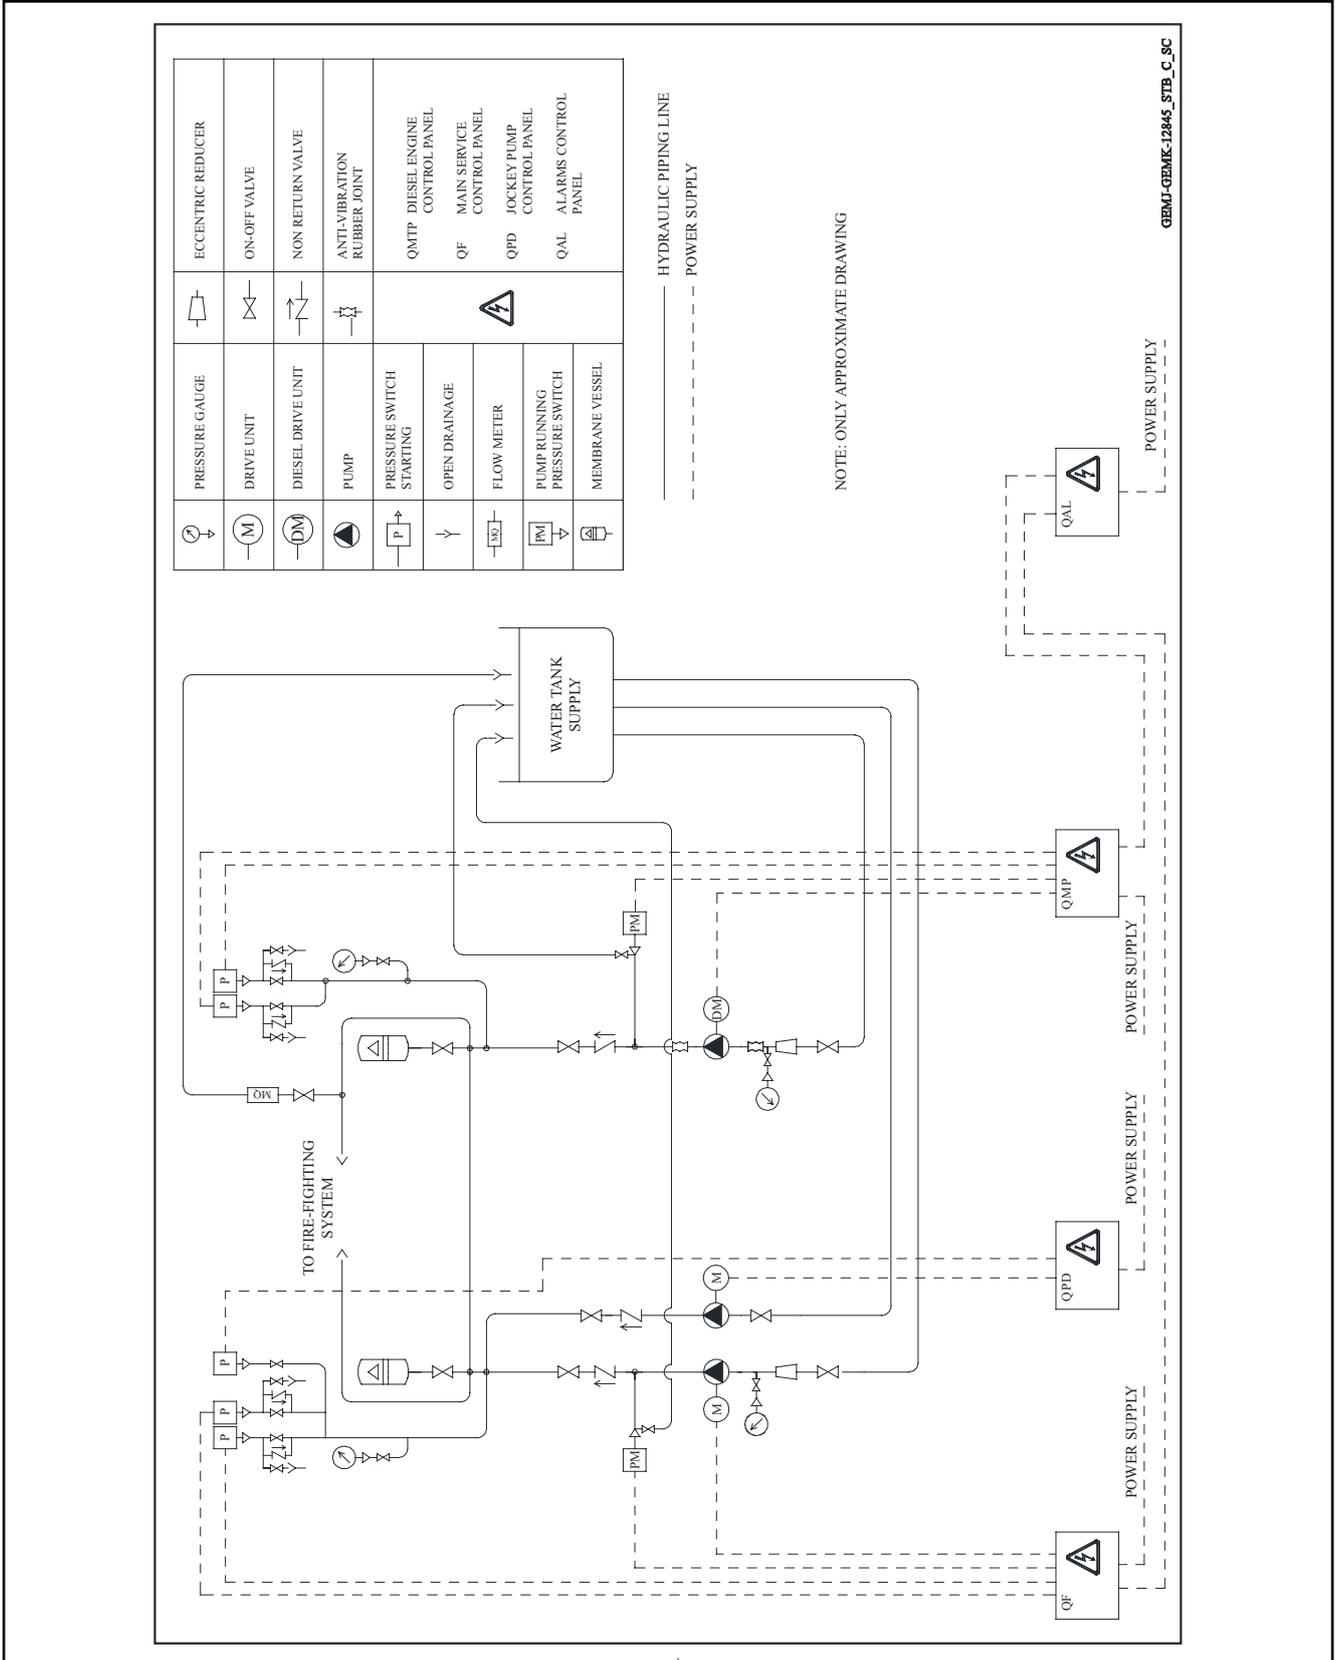

- The Lowara GEM EN 12845 fire-fighting modules are CE-marked in conformity with the following directives:
  - Machinery Directive 2006/42/EC.
  - Low Voltage Directive 2006/95/EC.
  - Electromagnetic Compatibility Directive 2004/108/EC.
- Electric pump performance complies with the following standard:
  - ISO 9906-A Rotodynamic pumps – hydraulic performance acceptance tests.
- The GEM fire-fighting modules conform to the European fire-fighting Standard EN 12845. The automatic shut-off versions also conform to the UNI 10779 Italian Standard for hydrant systems.
- The NSCC, NSC series pumps used in fire-fighting modules conform to the Standard EN 12845 (rif. 10.1).

## PUMP CHARACTERISTICS

### NSCC, NSC32, 40, 50, 65, 80, 100, 125

- New generation of centrifugal electric pumps with single-stage axial suction, with flanged axial suction, flanged radial discharge and horizontal shaft. The entire series conform the ErP 2015 directive. The pumps NSCC, NSC have body and sealing disc in cast iron, while the impellers are made of stainless steel, cast iron or bronze depending on the model.
- The pumps are equipped with mechanical interchangeable seals and have been designed with "back pull-out" configuration (you can remove impeller, hub and engine without disconnecting the pump body from the piping system).
- Dimensions of connection in accordance with EN 733
- Flanges according to EN 1092-2 and EN 1092-1
- Electric engines with IE3 efficiency level; motor-pump coupling by hub, support, flexible joint with spacer. Electrical performance according to EN 60034-1.
- Diesel engines: motor-pump coupling with flexible joint, continuous operation in full-load mode with continuous rated power in conformity with ISO 3046, direct transmission, standard direct air or water cooling. Other characteristics in compliance with EN12845.
- Lowara NSCC, NSC series pumps according to EN 12845 chapter 10, meets the requirements for the distribution of water in stationary sprinkler systems that use water spray. Operated in event of fire and during the tests.
- For other characteristics, consult the relative dedicated technical catalogue.

### 1VM SERIES ELECTRIC PUMPS (JOCKEY PUMP)

- The VM is a vertical multistage high-pressure centrifugal pump, with threaded sleeves on suction and delivery. The pumps have a one-piece design and are equipped with a mechanical seal.
- The VM series presents pump body made of cast iron, impellers are made in NorylTM, while the shirt is in stainless steel with TiG welding.
- The VM have surface IE3 motors, high performance and quiet operation, designed and produced by Lowara in compliance with EN standards.
- For other characteristics, consult the relative dedicated technical catalogue.

### 1SV SERIES ELECTRIC PUMPS (JOCKEY PUMP)

- SV pump is a vertical multistage pump, not self-priming, coupled with standard motor IE3.
- Suction and delivery outlets in line, body and flange in AISI 304.
- Mechanical seal according to EN 12756 (ex DIN 24960) and ISO 3069.
- For other characteristics, consult the relative dedicated technical catalogue.

## ADDITIONAL FEATURES

GEM standard module has the following features:

### • PERIODIC AUTOTEST

The control panel of the jockey pump features, as standard, an electronic card with display including the autotest function.

Only if enabled, at a pre-set time and day the pump is started up and kept running for 1 minute. During this interval, the control circuit checks if the pressure in the re-circulation circuit closes the contact of the pressure switch.

In case of anomalies, the relative auxiliary self-test alarm relay available for remote signalling is activated and memorised. The EN12845 Standard does not provide for the presence of a self-test circuit but asks for periodic checks to be carried out by the user, hence the periodic self-test function cannot substitute the above checks.

### • AUTOMATIC SHUT OFF FUNCTION (FOR UNI 10779 HYDRANT SYSTEMS)

There is an automatic shut-off circuit on the control panel of each electric service pump.

In certain situations, it allows automatic shut-off once the system pressure has been kept at higher values than the start-up values for at least twenty minutes.

The functions of self-test and automatic shut-off are available as standard for each GEM module: Functions are disabled in factory settings and must be activated by the end user.

---

## GENERAL NOTES ON PUMP ROOMS

Each fire-fighting pump must be installed in a suitably heated room as room temperature must never fall below 4°C (see EN12845 10.3.3). The room temperature must remain below 40°C with the pumps operating at the maximum recommended load, regardless of the environmental conditions outside the room.

The size of the room must consider the need to perform maintenance and repair activities. Sufficient free space must be left around the pump to allow these activities to be performed: bear in mind that it may be necessary to dismount a complete pump or motor. In any case, leave a free space of at least 1 metre between the pump unit and the walls of the room.

To improve engine reliability during start-ups in the cold season, the diesel engines are normally fitted with electric heaters with thermostat control in order to keep the engine water (water-cooled engines) or engine oil (oil-cooled engines) within the values recommended by the manufacturer.

## VENTILATION FOR ELECTRIC MOTOR

Adequate ventilation of the room in which the electric pump module is installed is very important for correct operation. It must:

- dissipate the radiated heat generated by the module while running
- ensure the inlet air flows properly and in a sufficient quantity to cool the electric motor.

For optimal operation, therefore, the air must enter through an opening with a fixed safety grille.

The size of the inlet and outlet openings must be calculated at least according to the air flow required to cool the electric motor.

## VENTILATION FOR DIESEL ENGINE

Adequate ventilation of the room in which the diesel engine pump is installed is very important for correct operation. It must:

- dissipate the radiated heat generated by the set while running
- ensure the inlet air flows properly and in a sufficient quantity to allow engine combustion
- cool the engine through the radiator (for water-cooled engines) or through the engine fan (for air-cooled engines).

For optimal operation, the heat radiated by the engine and exhaust pipes must be discharged outside the pump room. Given the large amounts of air required, the natural circulation caused by the temperature difference between internal and external air is not sufficient.

Therefore:

- the air must enter via an aperture protected by a fixed grille
- a fan must be fitted to extract air from the pump room.

For water-cooled engines, the area of the air inlet and outlet apertures must be equal to or greater than the area of the radiator.

The minimum size of the air inlet and outlet apertures must be calculated according to the sum of the air flows required for cooling and combustion (consider also the radiation power of the engines). To achieve the correct air flow, the fresh air is delivered through apertures located at the bottom of the room and, whenever possible, on the opposite side, so that the air flows around the entire engine before being expelled from the room.

The air flow must also be correct both for air-cooled engines and for engines fitted with water-water exchangers. Where necessary, a forced air extraction system must be installed, guaranteed in the absence of mains power for a time required for the fire-fighting system, and which starts simultaneously with the diesel engine.

## EXHAUST GAS

Always channel the exhaust gas outside the pump room via the dedicated piping connected to the silencer supplied with the diesel engine pump. The exhaust piping can run along the ceiling or the floor. It must also be protected from bad

weather and fitted with a condensate drain. The exhaust pipe must offer a low resistance to the exhaust gas, to not create an internal back pressure, which would cause a bad functioning of the engine. This implies drain pipes of limited length, diameter at least equal to that of the exhaust manifold of the engine and a reduced number of curves. The curves especially if elbow curves cause high pressure drops, resulting in an increasing back pressure.

In order not to exceed the maximum outlet back pressure (600 mm H<sub>2</sub>O for air-cooled engines and 1000 mm H<sub>2</sub>O for supercharged water-cooled engines), the following measures should also be taken:

- the piping must not be longer than 10 metres.
- the cross-section of the piping must equal at least that of the supplied exhaust pipe outlet.
- Use as few curves as possible (max. 6) and ensure they have a wide radius at least 2.5 times the internal diameter of the pipe.

## MAIN COMPONENTS

### FIRE-FIGHTING ELECTRIC PUMP MODULE (GEM..)

The electric service pump module comprises the following:

- NSCC Series Lowara normalised centrifugal service pump according to EN 733, with IE3 motors according to regulation (EC) n° 640/2009. Standard: cast-iron pump body and AISI 316 stainless steel for impeller models 32-40-50 and cast-iron for impellers models 65-80-100-125 . Alignment and anchor base. Service pump coupled by a flexible spacer joint to the three-phase motor capable of providing the maximum power absorption of the pump.
- Electric pump control panel with direct starting (DOL) up to and including 22 kW, star/triangle from 30 kW up.
- For the 32, 40, 50, 65 and 80 models of NSC service pumps up to and including 55 kW, the control panel is housed on the support fixed to the base of the electric pump. For higher power ratings, the control panel is floor-mounted and supplied with 5 m of cable. Control panel support in epoxy powder painted steel. For further details see dimensional tables.
- For the 65, 100 and 125 models of NSC pumps up to and including 55 kW, the control panel is supplied with 5 m of cable and is either wall-mounted or fixed to optional brackets. For high power ratings, the control panel is floor-mounted.
- Various pipe fittings (brass, galvanised steel)
- Stub pipe comprising a re-circulation device for the service pump. The re-circulation device allows a minimum capacity in order to prevent the pump overheating when working with closed delivery. There is also a pressure switch for activating the alarms of the pumps running, a test valve for checking the seal of the check valves, couplings for any connecting pipes to the priming tank for suction lift installations. The fitter must connect each re-circulation device to the suction tank or the priming tank or the drain.
- Inspection check valve on the delivery side of each pump. Threaded coupling for 2" diameter, flanged coupling for larger diameters.
- Main on/off valve on the delivery side of each pump, ball valves with lever handle for 2" diameter, butterfly valve with lever handle for DN65 to DN100 diameters, butterfly valve with hand-wheel and reducer for DN125 diameters and above. Device for monitoring ON/OFF status included. Electrical connections by customer. Valve locking kit available on request. Mechanical and electrical connection is responsibility of the client.
- Pressure gauge on the delivery side of the service pump
- On/off ball valve for connecting the expansion vessel (standard 24 l) and fitting for the hydraulic connection of the jockey pump delivery line, if fitted.
- Two start-up pressure switches for the service pump. Start-up takes place through the pressure switch, but it must be manually stopped (apart from the version with automatic shut-off). Pressure switches are connected to the delivery pipe with a dedicated hydraulic device. For the electric jockey pump, if present, both start-up and stopping are determined by the dedicated pressure switch.
- Limit to supply: 2"diameter female galvanized T-shaped pipe, flanged "T" in painted iron (PN 16).

Where necessary, the jockey pump is available as a floor-mounted accessory kit: GEM + JOCKEY KIT version. The hydraulic delivery piping of the jockey pump can be connected to the socket on the delivery line of the service pump. The jockey pump control panel is supplied with 5 m of cable and can be fixed to the wall. The universal bracket kit for housing the control panel can be supplied on request.

(Installation and floor-mounting by the customer).

## **FIRE-FIGHTING ELECTRIC PUMP MODULE WITH JOCKEY PUMP (GEM..J)**

The electric service pump module, complete with jockey pump, comprises the following:

- NSCC Series Lowara normalised centrifugal service pump according to EN 733, with IE3 motors according to regulation (EC) n° 640/2009. Standard: cast-iron pump body and AISI 316 stainless steel for impeller models 32-40-50 and cast-iron for impellers models 65-80-100-125 . Alignment and anchor base. Service pump coupled by a flexible spacer joint to the three-phase motor capable of providing the maximum power absorption of the pump.
- Series VM and SV jockey pump, fixed to the base of the service pump with a dedicated bracket. Standard hydraulic components: check valve, hose, on/off ball valves on the suction and delivery side, start-up pressure switch. All the material assembled and tested.
- Electric pump control panels with direct starting (DOL) up to and including 22 kW, star/triangle from 30 kW up.
- For the 32, 40, 50, 65 and 80 models of NSC service pumps up to and including 55 kW, the control panel is housed on the support fixed to the base of the electric pump. For higher power ratings, the control panel is floor-mounted and supplied with 5 m of cable. Control panel support in epoxy powder painted steel. For further details see dimensional tables.
- For the 65, 100 and 125 models of NSC pumps up to and including 55 kW, the control panel is supplied with 5 m of cable and is either wall-mounted or fixed to optional brackets. For high power ratings, the control panel is floor-mounted.
- Various pipe fittings (brass, galvanised steel)
- Stub pipe comprising a re-circulation device for the service pump. The re-circulation device allows a minimum capacity in order to prevent the pump overheating when working with closed delivery. There is also a pressure switch for activating the alarms of the pumps running, a test valve for checking the seal of the check valves, couplings for any connecting pipes to the priming tank for suction lift installations. The fitter must connect each re-circulation device to the suction tank or the priming tank or the drain.
- Inspection check valve on the delivery side of each pump. Threaded coupling for 2" diameter, flanged coupling for larger diameters.
- Main on/off valve on the delivery side of each pump, ball valves with lever handle for 2" diameter, butterfly valve with lever handle for DN65 to DN100 diameters, butterfly valve with hand-wheel and reducer for DN125 diameters and above. Device for monitoring ON/OFF status included. Electrical connections by customer. Valve locking kit available on request. Mechanical and electrical connection is responsibility of the client.
- Pressure gauge on the delivery side of the service pump
- On/off ball valve for connecting the expansion vessel (standard 24 l).
- Hydraulic connection of the delivery side of the jockey pump.
- Two start-up pressure switches for the service pump. Start-up takes place through the pressure switch, but it must be manually stopped (apart from the version with automatic shut-off). Pressure switches are connected to the delivery pipe with a dedicated hydraulic device. For the electric jockey pump, if present, both start-up and stopping are determined by the dedicated pressure switch.
- Limit to supply: 2"diameter female galvanized T-shaped pipe, flanged "T" in painted iron (PN 16).

(Installation and floor-mounting by the customer).

## DIESEL ENGINE PUMP FIRE-FIGHTING MODULE (GEMK ..)

The diesel engine pump module comprises the following:

- Lowara NSC centrifugal service pump normalised according to EN 733.
- Standard: cast-iron pump body and AISI 316 stainless steel for impeller models 32-40-50 and cast-iron for impellers models 65-80-100-125.
- Diesel Engine with engine-pump coupling via a flexible coupling, continuous operation in the full-load mode with continuous rated power in conformity with ISO 3046, direct transmission, standard direct air or water cooling. Other characteristics in compliance with EN 12845.
- Base in bent sheet metal or structural steel and epoxy powder painted in RAL 5010.
- Control panel for diesel engine pump and battery charger.
- Engine shut-off device from electric control (Electric stop).
- Fuel tank for diesel engine with supplementary catch basin (EN 12845 chap. 10), complete with float valve, reserve indicator switch and drain valve. Positioning and anchoring to the floor. A manual fuel make-up pump to mount on the metal tank support is available on request.
- Double engine starting relay.
- Diesel engine start circuit with two independent batteries. 3 m long control panel – relay box connection cable. 5 m long cables are available on request.
- Various pipe fittings (brass, galvanised steel).
- Anti-vibration coupler on the delivery side of the service pump.
- Stub pipe comprising a re-circulation device for the service pump. The re-circulation device allows a minimum capacity in order to prevent the pump overheating when working with closed delivery. There is also a pressure switch for activating the alarms of the pumps running, a test valve for checking the seal of the check valves, couplings for any connecting pipes to the priming tank for suction lift installations. The fitter must connect each re-circulation device to the suction tank or the priming tank or the drain.
- Inspection check valve on the delivery side of each pump. Threaded coupling for 2" diameter, flanged coupling for larger diameters.
- Main on/off valve on the delivery side of each pump, ball valves with lever handle for 2" diameter, butterfly valve with lever handle for DN65 to DN100 diameters, butterfly valve with hand-wheel and reducer for DN125 diameters and above. Device for monitoring ON/OFF status included. Electrical connections by customer. Valve locking kit available on request.
- Pressure gauge on the delivery side of the service pump.
- On/off valve for connecting the expansion vessel (standard 24 l) and fitting for the hydraulic connection of the jockey pump delivery line, if fitted.
- Two start-up pressure switches for the service pump. Start-up takes place through the pressure switch, but it must be manually stopped (apart from the version with automatic shut-off). For the electric jockey pump, if present, both start-up and stopping are determined by the dedicated pressure switch. The hydraulic circuit of the pressure switch starting the service pump comprises: piping to the delivery line, recirculation circuit. This circuit includes on/off valve, a non-return valve, a discharge valve and various pipe fittings. The configuration of the circuit allows the pressure switch to trip even when the relative on/off valve is closed.
- Limit to supply: 2" diameter female galvanized T-shaped pipe, flanged "T" in painted iron (PN 16).

The diesel engine pump is supplied with its own base complete with anti-vibration feet (installed and secured to the floor by the customer), control panel fixed to the fuel tank complete with 3 metre long cables (5 m long cables available on request). Fuel tanks with supplementary catch basin, batteries housed on the plate attached to the tank frame.

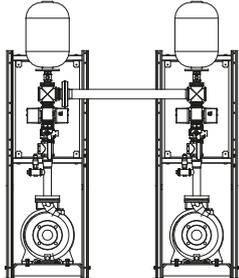

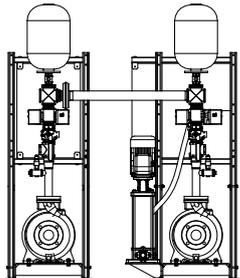

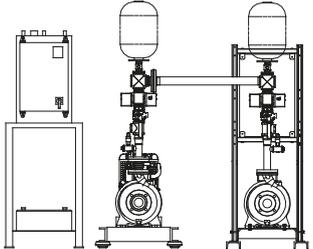

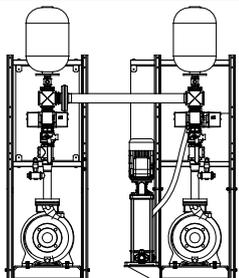

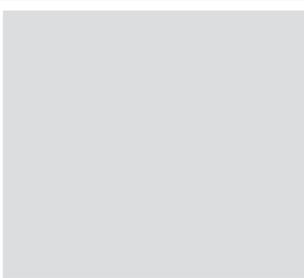

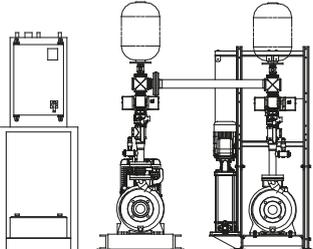

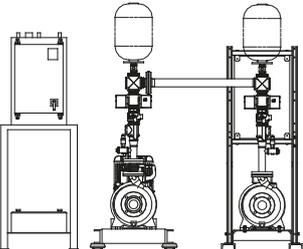

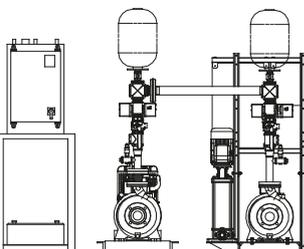

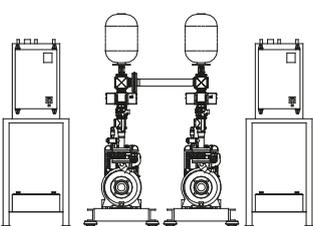

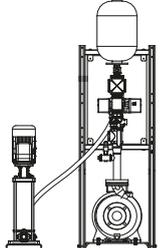

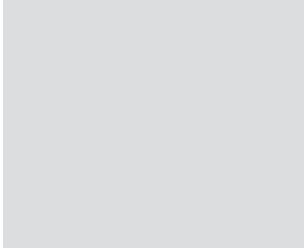

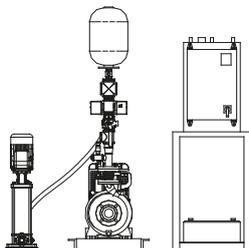

Where necessary, the jockey pump is only available as an accessory kit to attach to the floor: GEMK + JOCKEY KIT version. The hydraulic jockey pump delivery piping can be connected to the socket on the service pump delivery line. The jockey pump control panel comprises 5 m of cable and can be fixed to the fuel tank, next to the diesel engine pump control panel. The universal bracket kit for housing the jockey pump control panel can be supplied on request, otherwise the control panel can be wall-mounted.

(Installation and floor-mounting by the customer).

## JOINING PIPE KITS

Lowara manufactures the single modules according to UNI EN 12845 separately in order to combine them according to system requirements. By combining the modules, in fact, the water supply specifications described in EN 12845 can be obtained. These water supplies can be single, superior, duplicated or combined. Fire-fighting modules are generally fitted with two main service pumps, one backing up the other. The choice of electric motors or diesel engines depends on the level of reliability required from the system. The above modules can be combined through joining kits in order to reproduce the required water supply configuration for the fire-fighting system. For dimension tables and combinations, see the accessories section.

Examples of multi-module layouts:

## **ACCESSORIES AVAILABLE ON REQUEST**

- **JOINING KIT**
- **SUCTION LIFT OR POSITIVE SUCTION HEAD KIT**
- **FLOW METER KIT**
- **PRIMING TANK**
- **PRIMING TANK ACCESSORIES KIT**
- **ELECTRIC JOCKEY PUMP KIT**
- **ANTI-VIBRATION COUPLER KIT**
- **DIESEL SUPPLEMENTARY CATCH BASIN KIT**
- **MONITORING VALVES KIT**
- **QAL 12845**
- **MULTI QAL12845 KIT**
- **GSM MODULE KIT**
- **Q2RILS CONTROL PANEL**
- **DRY-RUNNING SAFETY KIT**
- **MEMBRANE VESSEL KIT**
- **COUNTERFLANGE KIT**
- **KIT OF UNIVERSAL BRACKETS FOR CONTROL PANELS**
- **SET OF SPARE PARTS FOR DIESEL ENGINES**
- **FUEL DISCHARGE VALVE KIT**

The ACCESSORIES section shows all the information relative to each accessory (detailed description, tables, dimensions, combinations and codes).

## **SPECIAL EQUIPMENT ON REQUEST**

### **(Contact the Sales and Technical Assistance Service)**

GEM module for pumping sea water with pumps, valves, manifold and piping in AISI 316 or compatible alloys.

GEM module with non-standard supply voltages.

GEMK module water-cooled diesel engine pump.

GEMK module air-cooled diesel engine pump.

GEMK module diesel engine pump with large fuel tank.

### **Notes**

The GEM module is supplied without a suction manifold in accordance with EN12845 (points 10.6.2.2 and 10.6.2.3) which requires independent suction for each pump.

See EN12845 on "Fixed systems and fire extinguishing – Automatic sprinkler systems – Design, installation and maintenance" - for sizing the suction piping, defining whether the installation is to be considered suction lift or positive suction head and for operating limits.

The standard requires, whenever possible, the pumps to be installed with positive suction head, otherwise priming tanks must be provided with suitable automatic devices for signalling and replenishment (see accessories section).

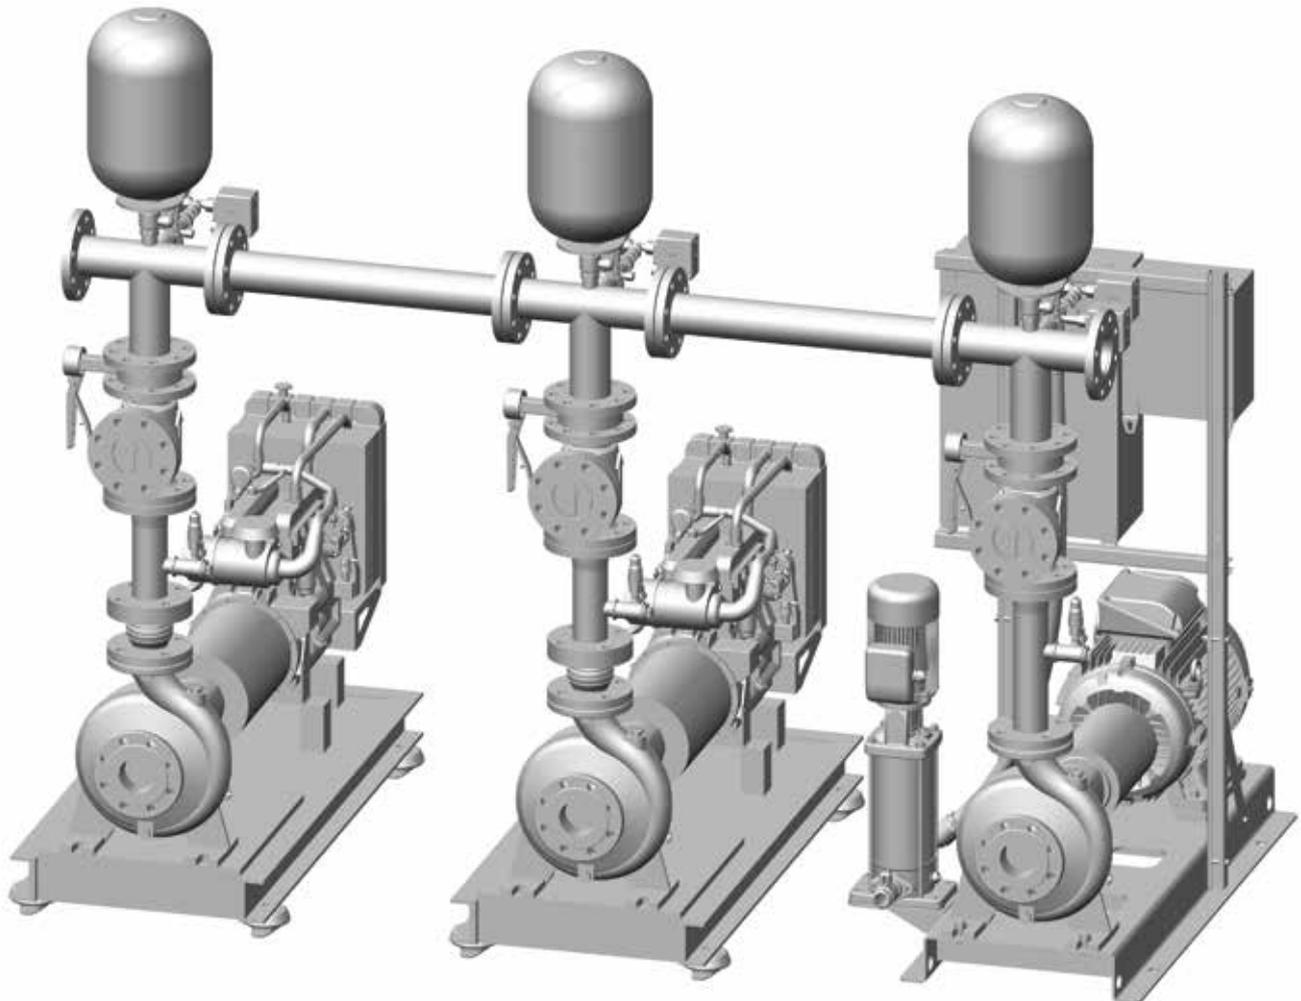

EN12845 states that the water pressure should not exceed 12 bar (point 8.2.1).

In some applications, pressures of over 12 bar can be reached (point 8.2.2).

In this case, pump sets with higher pressures than those defined in the standard are used.

The catalogue also contains GEM modules with service pump closing heads of up to 146 metres, suitable for such installations.

**FIRE-FIGHTING MODULES EN 12845 SERIES GEM  
SPECIAL EQUIPMENT ON REQUEST**

**ELECTRIC PUMP + JOCKEY PUMP MODULE (GEM..J)  
COMBINED WITH TWO DIESEL ENGINE PUMP MODULES (GEMK)**

## CONTROL PANEL FOR THE ELECTRIC SERVICE PUMP

Painted metal casing (IP 54) complete with:

- Main door-lock switch.
- Analogue ammeter.
- "MAN - AUT - 0" selector with extractable key only in automatic position.
- Electronic board with: display for current time and, if enabled, self- test state, keyboard for indicating electric voltage presence, correct phase sequence (three phase power supply), start-up request, pump functioning and no start-up, and pressure switch state, through LED lamps, lamp test button and starting and stopping buttons, according to EN12845 section 10.8.6, self-test circuit with contact to signal a failure in self-test

Inside:

- 12/24V transformer for auxiliary circuits and electronic board.
- Fuse holder and fuses for power and auxiliary circuits.
- Line contact maker (direct start-up up to 22 kW included), line and star/triangle contact makers (star/ triangle start-up), line contact makers and reactance switching (impedance start-up).
- Star/triangle exchanger timer or reactance switching.
- No-phase signal relay.
- Auxiliary relays.
- Current transformer.
- Terminal blocks.
- Dry contacts (max 24V, 1A) for activating no-phase acoustic/ visual alarms, pump on demand, pump running and start failure.
- Cable glands (excluding the versions to be fixed to the floor).
- Wiring diagram.

Electric service pump panel

## ELECTRIC SERVICE PUMP CONTROL PANEL OPTIONS AVAILABLE ON REQUEST

### CP alternative

Series of dry contacts for checking the status of the electric panel, in addition to the contacts already provided for signalling alarms:

- No phase
- Motor running
- MAN-AUT-0 selector position
- No start
- Pump on demand

### KV alternative

Electric panel with analogue voltmeter and phase switch.

### IP55 alternative

Panel with supplementary IP55 protection.

## ELECTRIC JOCKEY PUMP CONTROL PANEL

Painted metal casing (IP 55) complete with:

- Main door-lock switch.
- Line, running and thermal shutdown indicator lamps.
- Manual - automatic - off selector.

Inside:

- Transformer for 24V auxiliary circuits.
- Fuse holder and fuses for power and auxiliary circuits.
- Line contactor.
- Overload cut-out switch.
- Pump shut-off timer (0 ÷ 90 s).
- Terminal blocks.
- Cable glands.
- Wiring diagram.

Ready for connection to a float switch or minimum pressure switch for dry running protection. An optional level control module (available on request) allows the connection of probes with the possibility of adjusting sensitivity according to water hardness.

## ELECTRIC JOCKEY PUMP CONTROL PANEL OPTIONS AVAILABLE ON REQUEST

### CP alternative

Series of dry contacts for checking the status of the panel:

- Pump running
- Thermal shutdown (overload)
- No water

## DIESEL ENGINE PUMP CONTROL PANEL

Painted metal casing (IP 54) complete with:

- Electronic unit for control and management of the diesel engine. Display of alarms and status, battery voltage, speedometer, hour counter, alarm programming, enabled for self-test function and auto shut-off, date display, main signals and manual start button.
- Man-Auto-0 selector switch with key removable only in the automatic position.
- Pair of emergency battery start buttons.
- Main door-lock switch.

Inside:

- Fuse holder and fuses for power and auxiliary circuits.
- Pair of battery chargers 12Vdc/24Vdc.
- Control unit for management of diesel engine and alarms.
- Auxiliary relays.
- Engine heaters power supply circuits.
- Terminal blocks.
- Cable glands.
- Wiring diagram.

**Single-phase 1x230V standard power supply**, and is supplied standard with dry alarm signal contacts (max. 1A,30Vdc/125Vac/277Vac) available from the electronic controller:

- Non-automatic operating mode.
- Controller fault.
- Motor running.
- No start.
- General alarm.

## DIESEL ENGINE PUMP CONTROL PANEL OPTIONS

### AVAILABLE ON REQUEST

#### IP55 alternative

Panel with supplementary IP55 protection.

#### CP alternative

Series of dry relay exchange contacts for controlling the operating status of the control panel:

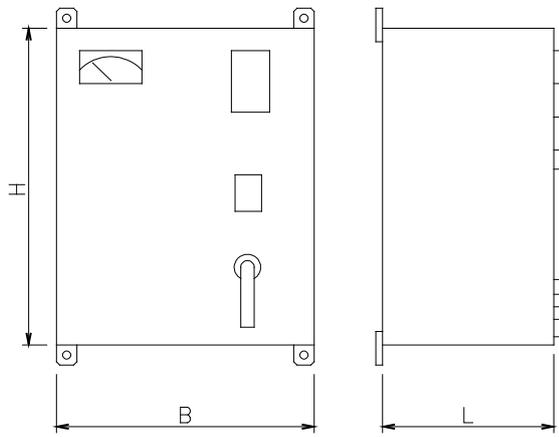

---

**Each GEM module is supplied factory assembled, calibrated and tested. The set is supplied complete with an instruction manual, pump manuals and wiring diagrams for the panels.**

For modules with floor-mounted panels, the electric panels are shipped together with the set in a separate pack and supplied with 5 metre long connecting cables (longer lengths available upon request). The paths must be prepared and the cables installed by the fitter.

## CONTROL PANEL DIMENSIONS

**INTRODUCTION**

## CHOICE AND SELECTION

### Criteria for choosing fire-fighting sets

A correct choice must consider various factors, including the correct sizing of the performance levels required for the system, local regulations and legislation, and especially the installation conditions relative to the installation site and whether a suction lift or a positive suction head is involved.

### Choosing the type of water supply

The type of water supply and, therefore, the type of GEM module to select depends on the type of system involved and is chosen according to the risk analysis performed by the designer.

There is no written rule for identifying the correct number of pumps to install.

GEM booster modules are normally designed so that every service pump can satisfy the following requirements:

100% of rated capacity with one or two pumps installed (one in service and the other in reserve), the joining kit is set for one operating pump.

If three pumps are installed, the capacity of the pump will be 50% of the total rated capacity and the third service pump will be considered as a reserve. In these cases, when superior or duplicated water supplies are involved, only one pump must be driven by an electric motor. Joining kit is set for two operating pumps. This type of configuration is available on request.

### Suction conditions of the booster set

The type of installation, suction lift or positive suction head, tends to affect (negatively or positively) the hydraulic performance of the pump. Remembering that EN12845 recommends against using suction lift installations, the following condition given by EN12845 must be satisfied in order to use the pump curve correctly:

$$NPSHd \geq NPSHr + 1 \text{ [m]}$$

Where: NPSHd is defined available.

NPSHr is defined requested from the pump.

As the suction check condition must be made at the max. requested flow, there can be different performance levels always respecting the NPSHd condition.

To select the booster set, consult the dedicated sections. Choice and selection: hydraulic performance levels, suction lift or positive suction head installation.

### Performance levels of booster sets: using the tables

The tables showing the hydraulic performance levels of GEM modules indicate the flow values at T-shaped delivery pipe. This value does not refer to pump performance but is net of the pressure drop on the pump discharge line. This field is shown in grey and the selection must be made here, where performance levels comply with the reference standard which considers the following conditions:

- Maximum water speed in the service pump discharge piping 6 m/sec.
- $NPSHd \geq NPSHr + 1$  at the maximum flow required.
- Max. difference in level of water considered 3,2 m (for suction lift).
- Suction pressure drops due to valves, piping, suction kit, flexible coupling (if diesel engine pump).

The reference suction conditions are the severest and most extreme that can occur.

## CHOICE AND SELECTION - SUCTION LIFT INSTALLATION

EN12845 recommends installing pumps in positive suction head conditions wherever possible. If this is not possible, the pumps can be installed in suction lift conditions according to the following rules:

- The height of the minimum water level at the pump axis must not be greater than 3,2 m.
- A foot valve must be installed in the lowest point of the suction piping.
- If more than one pump is installed, the suction piping must not be interconnected.

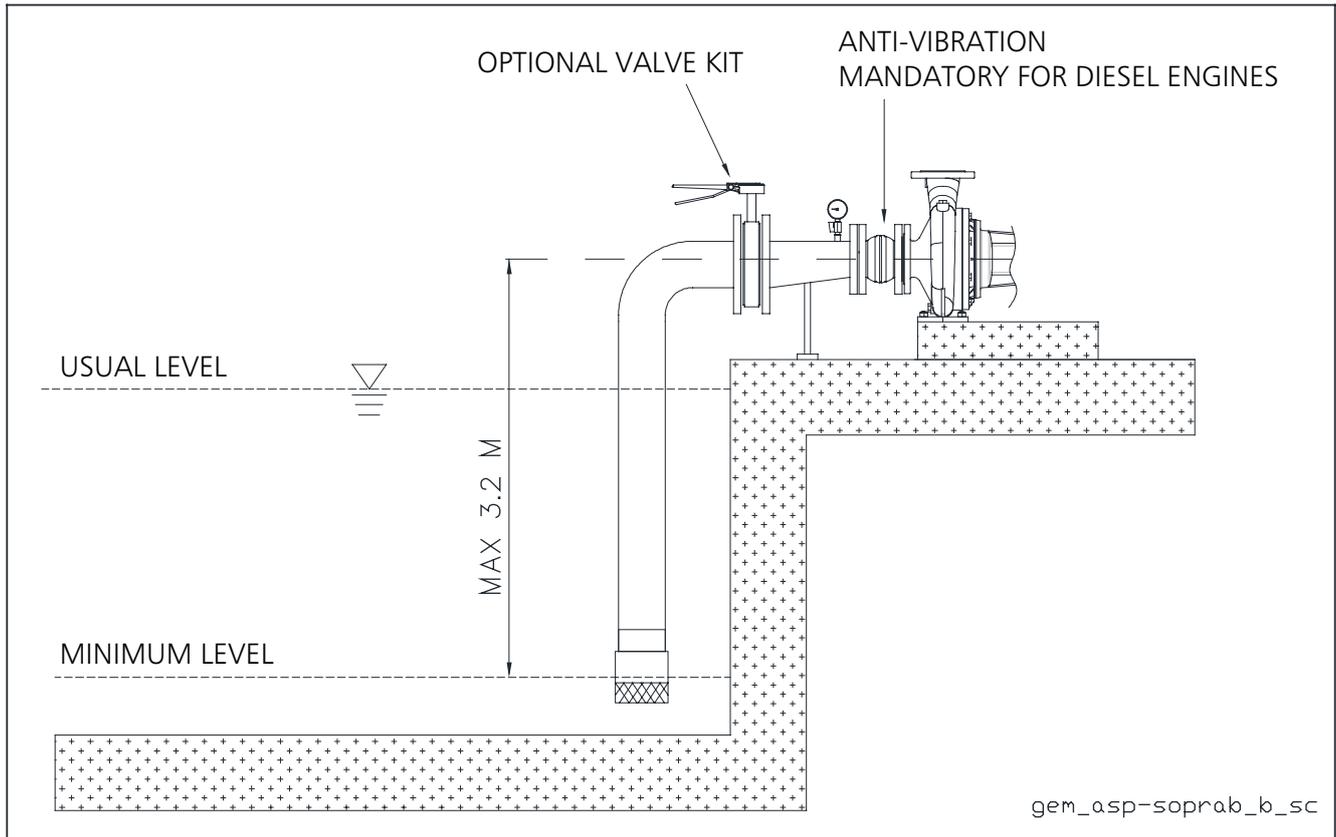

Fig. 1 suction lift installation diagram

In accordance with EN 12845 (10.6.2.1), the suction piping, including all the valves and unions, must be designed to ensure that the NPSH available at the pump inlet exceeds the required NPSH by at least 1 m at the maximum required flow rate.

$$\text{NPSHd} \geq \text{NPSHr} + 1$$

When selecting the type of pump to use for the GEM module, the installation conditions must be considered as these determine different pump performance levels.

An example of how to choose and check of the installation conditions is shown below:

considering the precalculation method, a suitable risk class for the system is identified, e.g.: OH3. Being in a suction lift condition, the most difficult situation is considered, i.e.: the maximum difference in water level of 3,2 m, as indicated in the standard. Being aware of the maximum requested flow 81 m<sup>3</sup>/h and the pressure required for the system e.g. 30 m, the pump is selected according to the tables on page 45-51 making sure the performance rating lies inside the area shown in grey.

The module version that satisfies the required work point is GEM2 and the pump is NSC50-200/D192.

## CHOICE AND SELECTION - SUCTION LIFT INSTALLATION

At this point, the installation conditions (suction lift) must be checked at the **maximum required flow**.

The following values are replaced in the known relation,  $NPSH_d \geq NPSH_r + 1$ :

$NPSH_r$  can be deduced from the table on page 126 which in this case is 4,1 m at the maximum requested flow 81 m<sup>3</sup>/h.

After replacing the value, the following will be true (water temperature around 15°C):

$$NPSH_d = 10,33 + (-3,2) - \sum H_{ct}$$

Where

10,33 atmospheric pressure

3,2 geodetic difference in level

$\sum H_{ct}$  suction pressure drop (valves, pipes, elbows...)

The value of  $\sum H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone, as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of  $H_c$  at the maximum required flow of the selected pump can be found in the diagram on page 144. This value is 0.06 m.

After entering it in the formula, we will have:

$$\sum H_{ct} = 0.06 + X$$

Where X is the pressure drop relative to all the suction piping after the eccentric cone,

Hence

$NPSH_d \geq NPSH_r + 1$  after replacing this, we will have:

$$10.33 + (-3.2) - \sum H_{ct} = 4.1 + 1$$

$$10.33 + (-3.2) - 0.06 - X = 4.1 + 1 \text{ which makeso}$$

$$X = 1.97 \text{ m}$$

Maximum value of total drops to consider on the inlet piping in order to respect the conditions of the standard.

Of course, this case was deliberately put in the worst suction conditions. The designer must check and set the values in an attempt to optimise suction conditions.

## CHOICE AND SELECTION - SUCTION LIFT INSTALLATION

### Checking performance of the set at rated flow.

The performance of the GEM module must now be checked in the installation conditions of the example used up until now.

Work point: Qm: 81 m<sup>3</sup>/h H = 30 m  
Module version: GEM2  
Selected pump: NSC50-200/D192

Starting from the usual relation given by the standard, we will have:

$$NPSHd \geq NPSHr + 1$$

$$NPSHd = 10.33 + (-3.2) - \Sigma Hct$$

NPSHr can be deduced from the table on page 126 which in this case is 4.1 m **at the maximum flow**.

considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone, as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of Hc at the maximum required flow of the selected pump can be found in the diagram on page 144. This value is 0.06 m.

After entering it in the formula, we will have:

$$\Sigma Hct = 0.06 + X$$

Where X is the pressure drop relative to all the suction piping after the eccentric cone,

Hence

NPSHd  $\geq$  NPSHr + 1 after replacing this, we will have:

$$10.33 + (-3.2) - \Sigma Hct = 4.1 + 1$$

$$10.33 + (-3.2) - 0.06 - X = 4.1 + 1 \text{ which makes}$$

$$X = 1.97 \text{ m}$$

Taking the pressure value of the selected set, the value corresponds to 38.1 m at the rated flow.

Therefore, the verification of the pressure values in the above suction conditions becomes:

$$H = 38.1 - (0.06 + 1.97) + (-3.2) = \mathbf{32.9 \text{ m} > \mathbf{30 \text{ m}}$$
 which is the pressure required for the system.

The result satisfies the performance required for the system in the installation conditions of the example.

## CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION

### Positive suction head installation

EN12845 recommends installing pumps in positive suction head conditions, wherever possible, according to the following rules:

- At least two thirds of the effective capacity of the suction tank must be above the level of the pump axis.
- The pump axis must not be more than 2 m above the minimum water level in the suction tank.

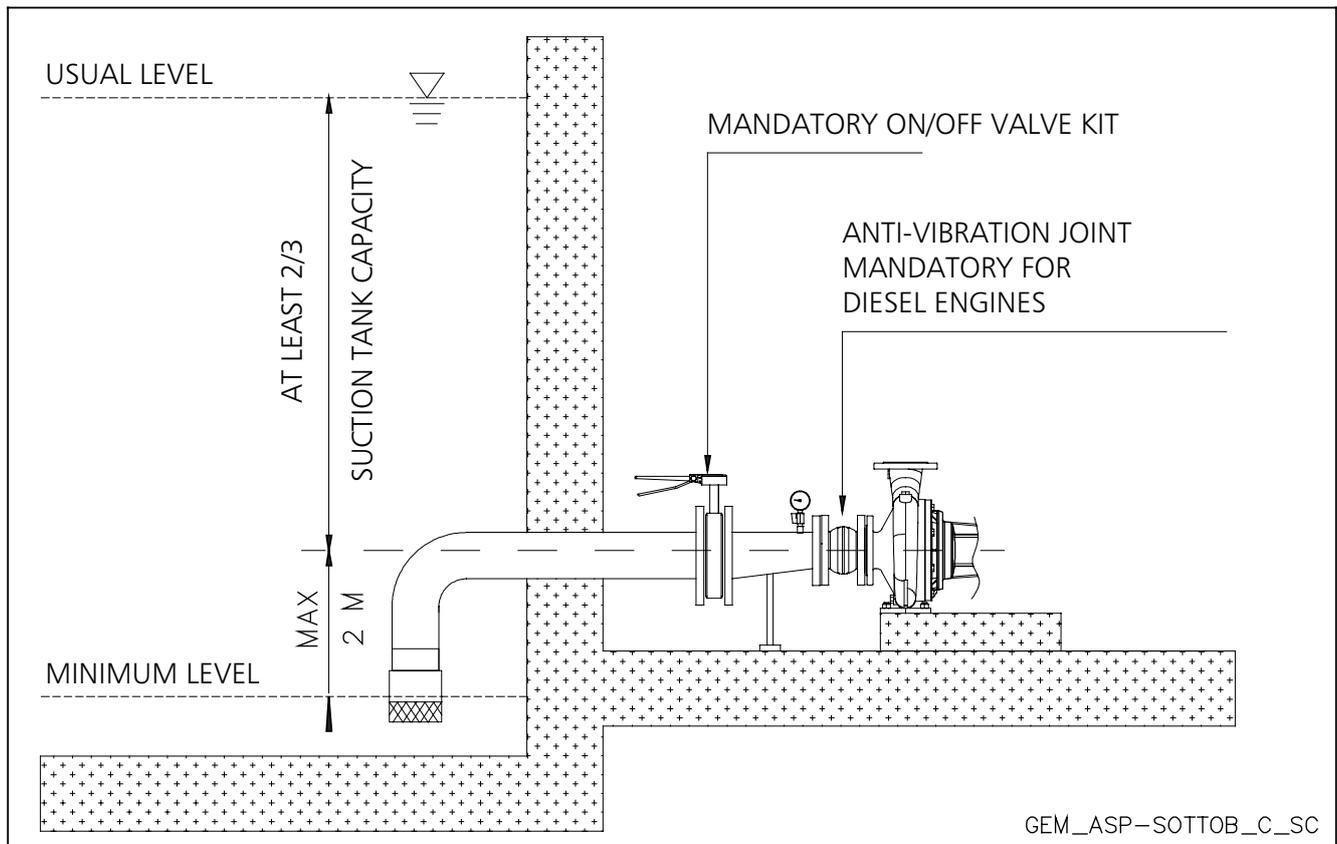

Fig. 2 positive suction head installation diagram

In accordance with EN 12845 (10.6.2.1), the suction piping, including all the valves and unions, must be designed to ensure that the NPSH available at the pump inlet exceeds the required NPSH by at least 1 m at the maximum required flow rate.

$$\text{NPSHd} \geq \text{NPSHr} + 1$$

When selecting the type of pump to use for the GEM modules, the installation conditions must be considered as these determine different pump performance levels.

An example of how to choose and check of the installation conditions is shown below:

considering the precalculation method, a suitable risk class for the system is identified, e.g.: OH3.

For this risk class, the maximum requested flow is 81 m<sup>3</sup>/h (Q<sub>m</sub>).

Being in the positive suction head condition, a neutral situation is used in order to consider the water level on the same horizontal plane as the pump, without benefiting from any positive level.

## CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION

Being aware of the maximum requested flow 81 m<sup>3</sup>/h and the pressure required for the system e.g. 35 m, the pump is selected according to the tables on pages 45-51 or tables on pages 116-142 making sure the performance rating is higher than the work point required by the system.

The module version that satisfies the required work point is GEM2 and the pump is NSC50-200/D192.

At this point, the installation conditions (positive suction head) must be checked at the maximum requested flow.

The following values are replaced in the known relation,  $NPSH_d \geq NPSH_r + 1$ :

$NPSH_r$  can be deduced from the table on page 126 which in this case is 4.1 m at the maximum requested flow. After replacing the value, the following will be true (water temperature around 15° C):

$$NPSH_d = 10.33 + (0) - \sum H_{ct}$$

Where

10.33 atmospheric pressure

0 geodetic difference in level

$\sum H_{ct}$  suction pressure drop (valves, pipes, elbows...)

The value of  $\sum H_{ct}$  considers the pressure drops of the suction kit, inclusive of expansion joint (if diesel engine pump), reduction cone and on-off valve (mandatory for positive suction head installation), as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of  $H_c$  (expansion joint and on/off valve) at the maximum required flow of the selected pump can be found in the diagram on pages 143-144. This value is 0,11 m. After entering it in the formula, we will have:

$$\sum H_{ct} = 0,11 + X$$

Where X is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$  after replacing this, we will have:

$$10.33 + (0) - \sum H_{ct} = 4.1 + 1$$

$$10.33 + (0) - 0,11 - X = 4.1 + 1 \text{ which makes}$$

$$X = 5.12 \text{ m}$$

Maximum value of total drops to consider on the inlet piping in order to respect the conditions of the standard. Of course, the case in point was deliberately tested in neutral suction conditions that does not benefit nor optimise suction.

The designer must check and set the values in an attempt to make suction conditions as efficient as possible.

## CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION

### Checking performance of the selected GEM module at maximum requested flow.

The performance of the GEM module must now be checked in the installation conditions of the example used up until now.

Work point:  $Q_m: 81 \text{ m}^3/\text{h}$   $H = 35 \text{ m}$   
 Module version: GEM2  
 Selected pump: NSC50-200/D192

Starting from the usual relation given by the standard, we will have:

$$NPSH_d \geq NPSH_r + 1$$

$$NPSH_d = 10.33 + (0) - \sum H_{ct}$$

$NPSH_r$  can be deduced from the table on page 126 which in this case is 4.1 m **at the maximum flow**.

The value of  $\sum H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone and on-off valve ( $H_c$ ), as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of  $H_c$  at the maximum required flow of the selected pump can be found in the diagram on page 143-144. This value is 0,11 m.

After entering it in the formula, we will have:

$$\sum H_{ct} = 0.11 + X$$

Where X is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$  after replacing this, we will have:

$$10.33 + (0) - \sum H_{ct} = 4.1 + 1$$

$$10.33 + (0) - 0.11 - X = 4.1 + 1 \text{ which makes}$$

$$X = 5.12 \text{ m}$$

Value of the total drops to consider on the suction piping

Taking the pressure value of the GEM module, the value corresponds to 38,1 m at the rated flow.

Therefore, the verification of the pressure values in the above suction conditions becomes:

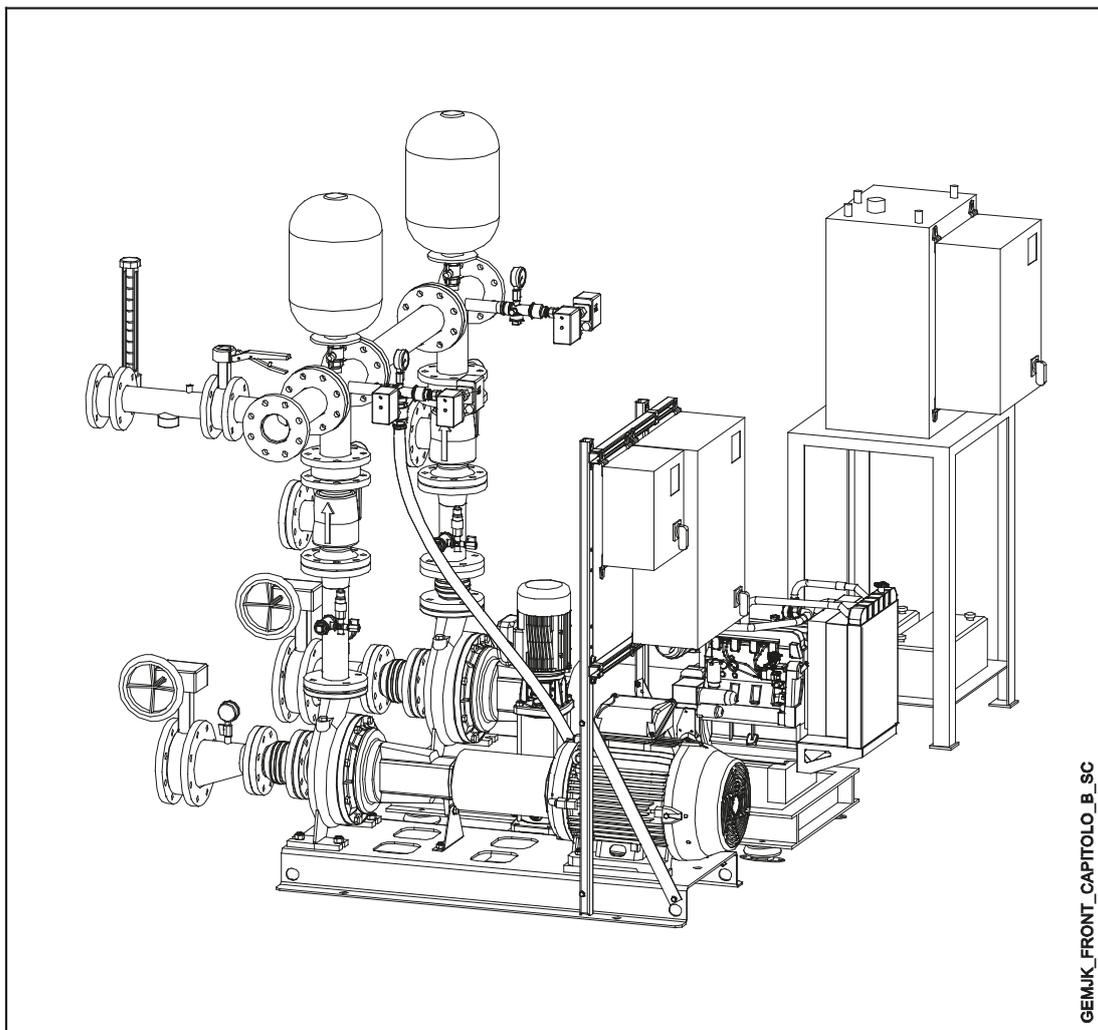

$$H = 38.1 - 0.11 - 5.12 = \mathbf{32.9 \text{ m} < 35 \text{ m}}$$
 which is the pressure required for the system.

This value does not satisfy the performance levels required for the system, but, as is evident, we have deliberately used a neutral installation condition that does not benefit suction. If a pump with a positive level of 3 m is installed, the pressure will be 35,9 m which satisfies the relation.

# Single and combined modules, NSC series

EN 12845 firefighting with horizontal centrifugal  
pumps series NSC

**50 Hz**

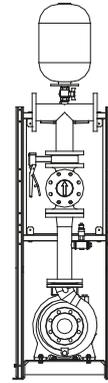

## NSCC, NSC SINGLE MODULE

Single EN 12845 firefighting pressure modules with an electric service pump (GEM) and, if required, an on-board jockey pump (GEM..J) or diesel engine pump (GEMK) and, if required, a jockey pump kit, to adapt to the specific requirements of each application.

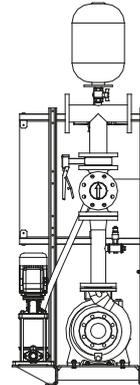

### GEM.. MODULE

- Single electric service pump module with horizontal centrifugal pump and cast-iron body, NSC series.

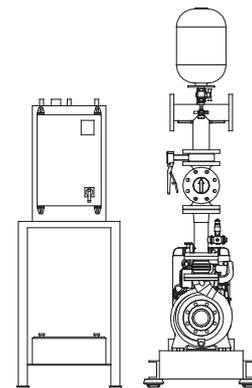

### GEM..J MODULE

- Single electric service pump module with horizontal centrifugal hydraulic pump and cast-iron body, NSC series, with series 1SV or 1VM multi-stage vertical jockey pump on-board.

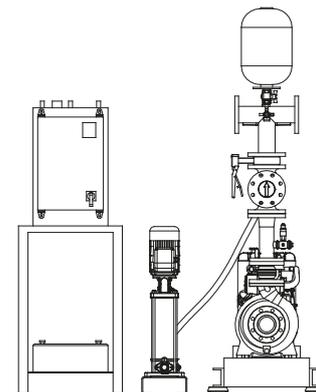

### GEMK.. MODULE

- Single diesel engine service pump module with horizontal centrifugal pump and cast-iron body, NSC series.

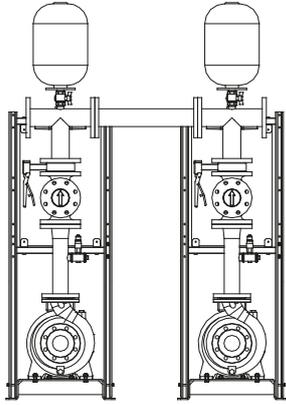

### GEMK.. MODULE AND ELECTRIC JOCKEY PUMP

- Single diesel engine service pump module with horizontal centrifugal hydraulic pump and cast-iron body, NSC series, with series 1SV or 1VM multi-stage vertical jockey pump, **not on-board**, supplied as an accessory kit.

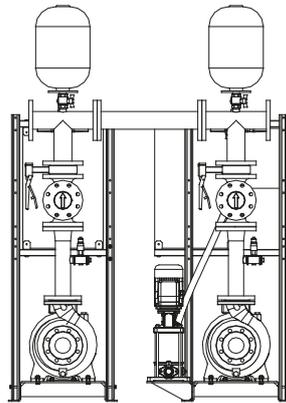

## NSCC, NSC COMBINED MODULES

EN 12845 combined firefighting pressure modules, with two electric service pumps (GEM..+GEM..) and, if required, a jockey pump on-board (GEMJ..+GEM..) or an electric service pump and a diesel engine service pump (GEM..+GEMK..) and, if required, a jockey pump on-board the electric pump module, (GEMJ..+GEMK..) to adapt to the specific requirements of each application.

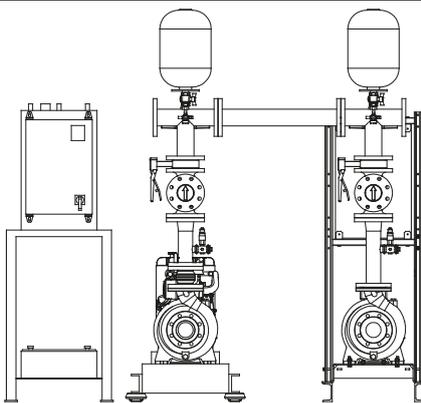

### GEM..+GEM.. MODULES

- Combined modules comprising two electric service pump modules with horizontal centrifugal pumps and cast-iron bodies, NSC series.

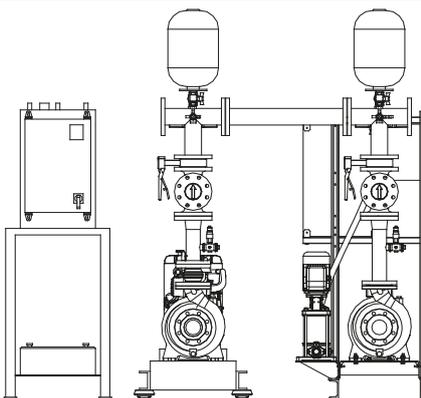

### GEMJ..+GEM.. MODULES

- Combined modules comprising two electric service pump modules with horizontal centrifugal pumps and cast-iron bodies, NSC series, with series 1SV or 1VM multi-stage vertical jockey pump on-board.

### GEM..+GEMK.. MODULES

- Combined modules comprising an electric service pump module and a diesel engine service pump module with horizontal centrifugal pumps and cast-iron bodies, NSC series.

### GEMJ..+GEMK.. MODULES

- Combined modules comprising an electric service pump module and a diesel engine service pump module with horizontal centrifugal pumps and cast-iron bodies, NSC series, with series 1SV or 1VM multi-stage vertical jockey pump on-board the electric pump.

(\*) The current indicated is the maximum current absorbed.

At the set composed by 3x400V three-phase power supply series GEM, GEM..J adding the control panel current of the engine pump  
GEMK at single phase power supply 1x230Vac

MOD\_EN-NSC2\_2p50\_a\_tle

**NSC MODULES**

**EN 12845**  
**fire-fighting**  
**pressure**  
**module**

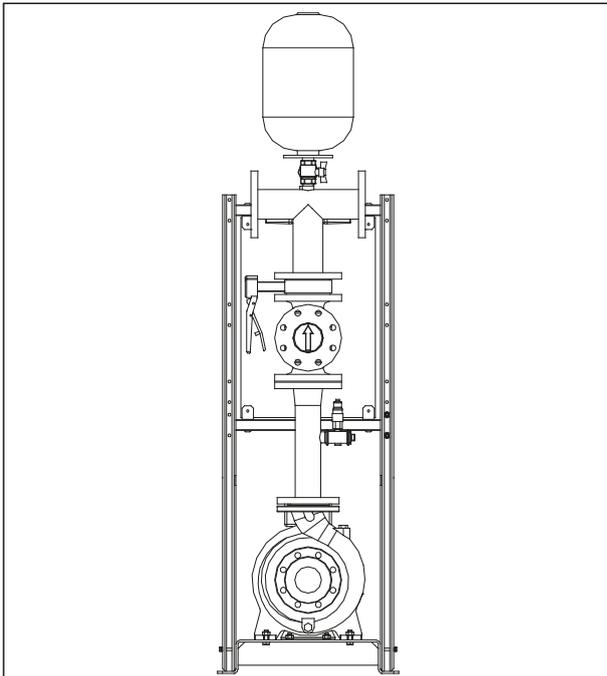

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (sprinklers).

**GEM ..NSCC**  
**series**  
**Single electric**  
**service pump module**

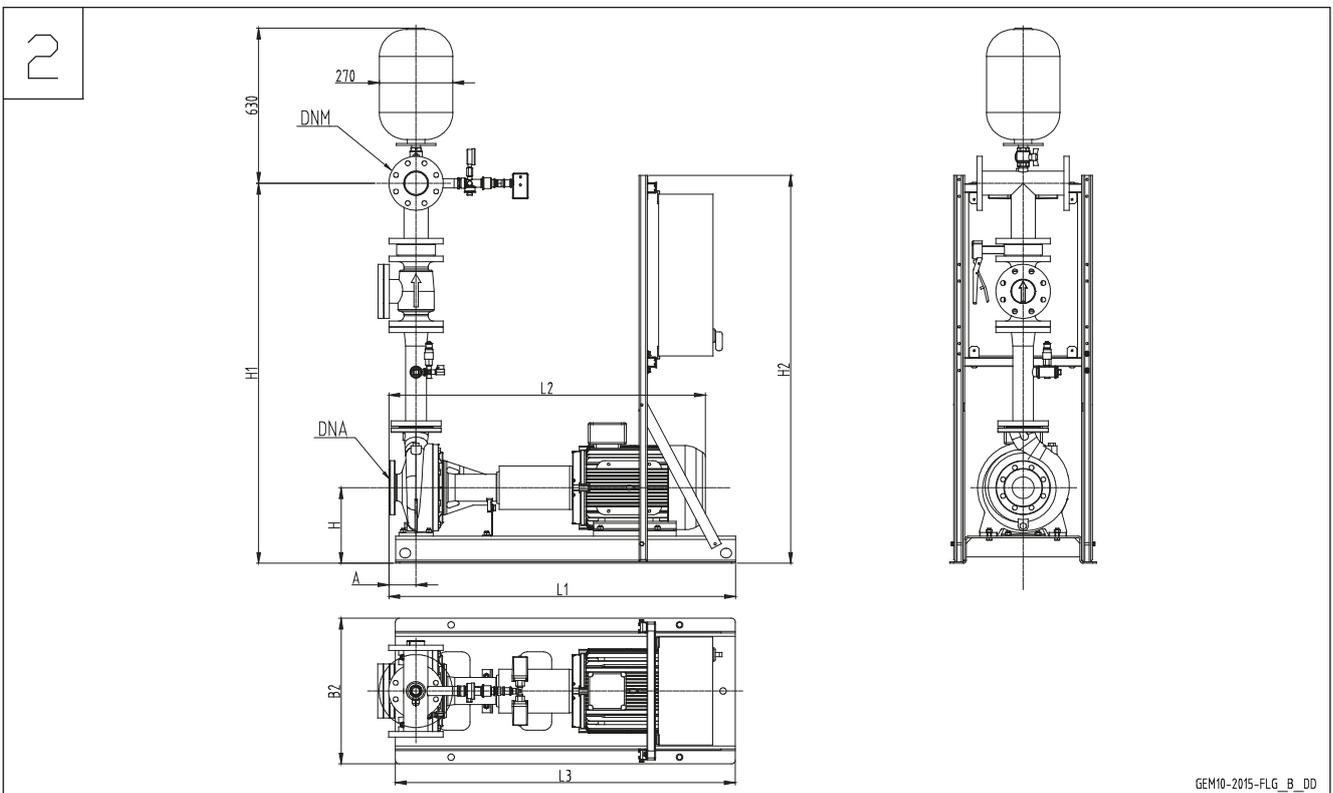

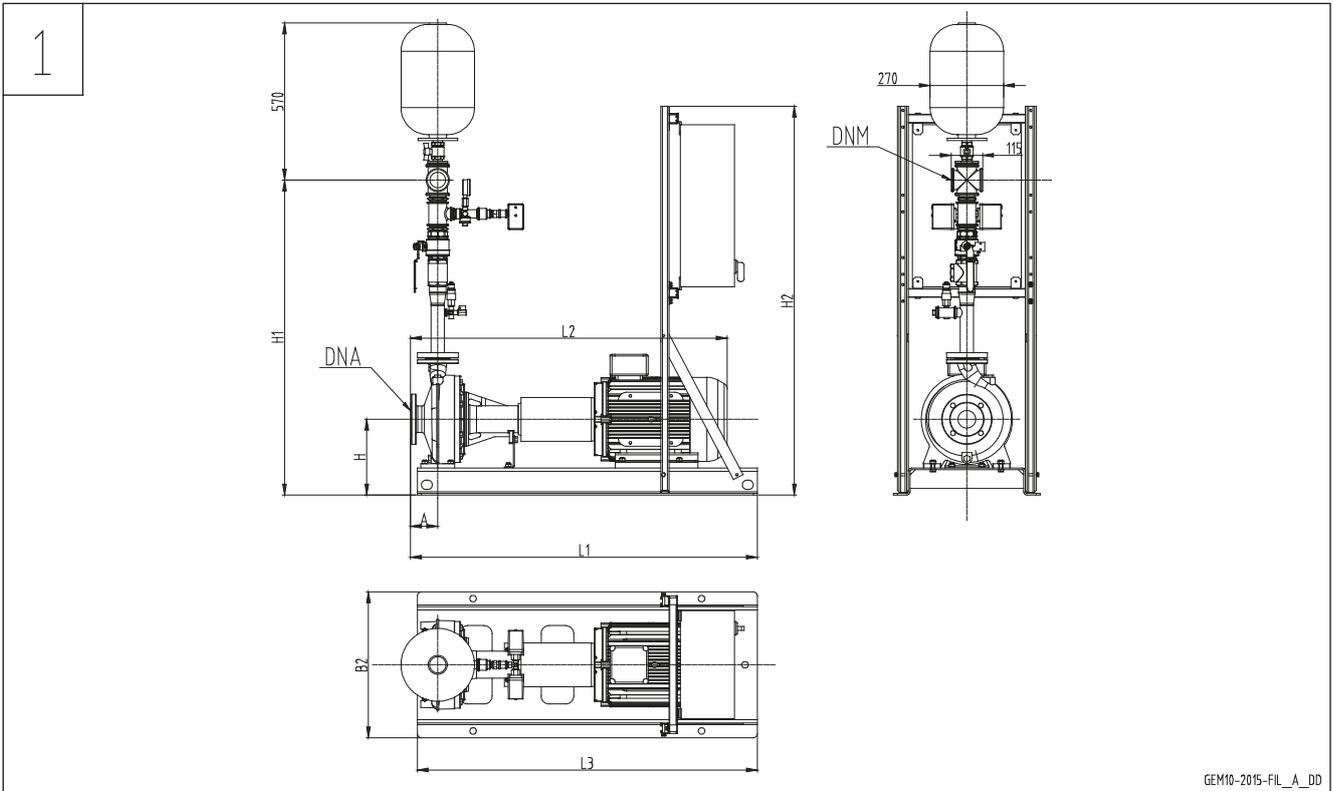

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pump 3 x 400 Vac  $\pm$  10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:**
  - 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pump IP54.
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..).
- **Maximum power output:**
  - Electric service pump 200 kW.
- **Horizontal electric service pump:**
  - FHF series (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gem10\_nsc100\_c\_td

Up to 55 kW, wall-mounted electric control panel for service pump, 1 support bracket kit available on request. Over 55 kW, floor-mounted electric control panel for service pump.

**EN 12845  
fire-fighting  
pressure  
module**

**MARKET SECTORS**

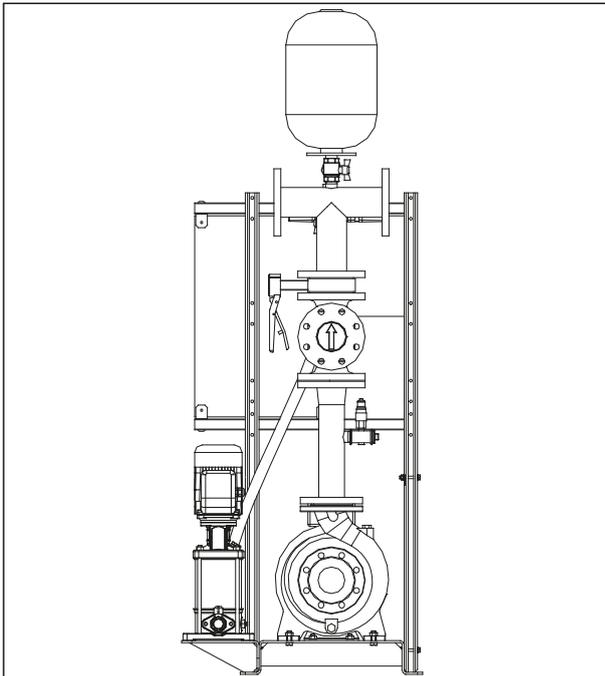

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEM..J..NSCC  
series**

**Single electric service pump module,  
with jockey pump on board**

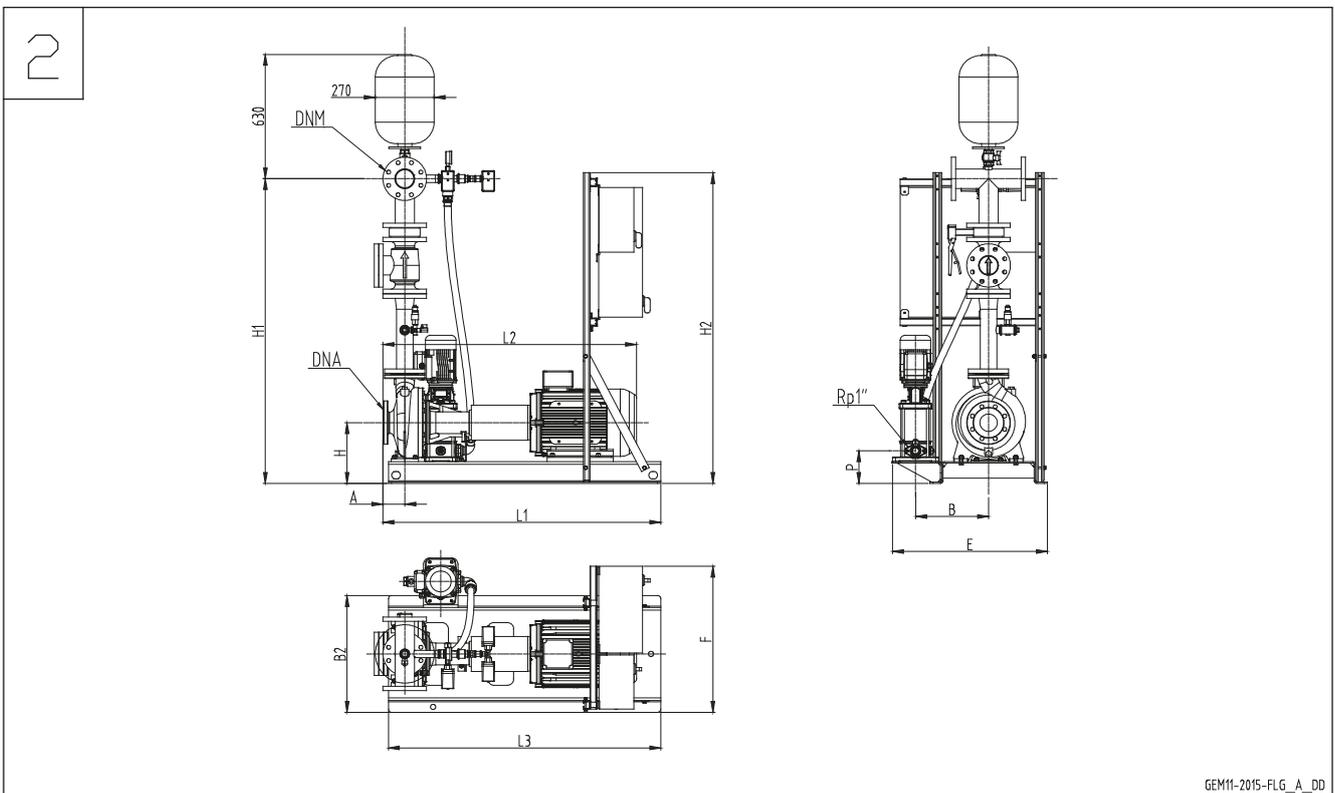

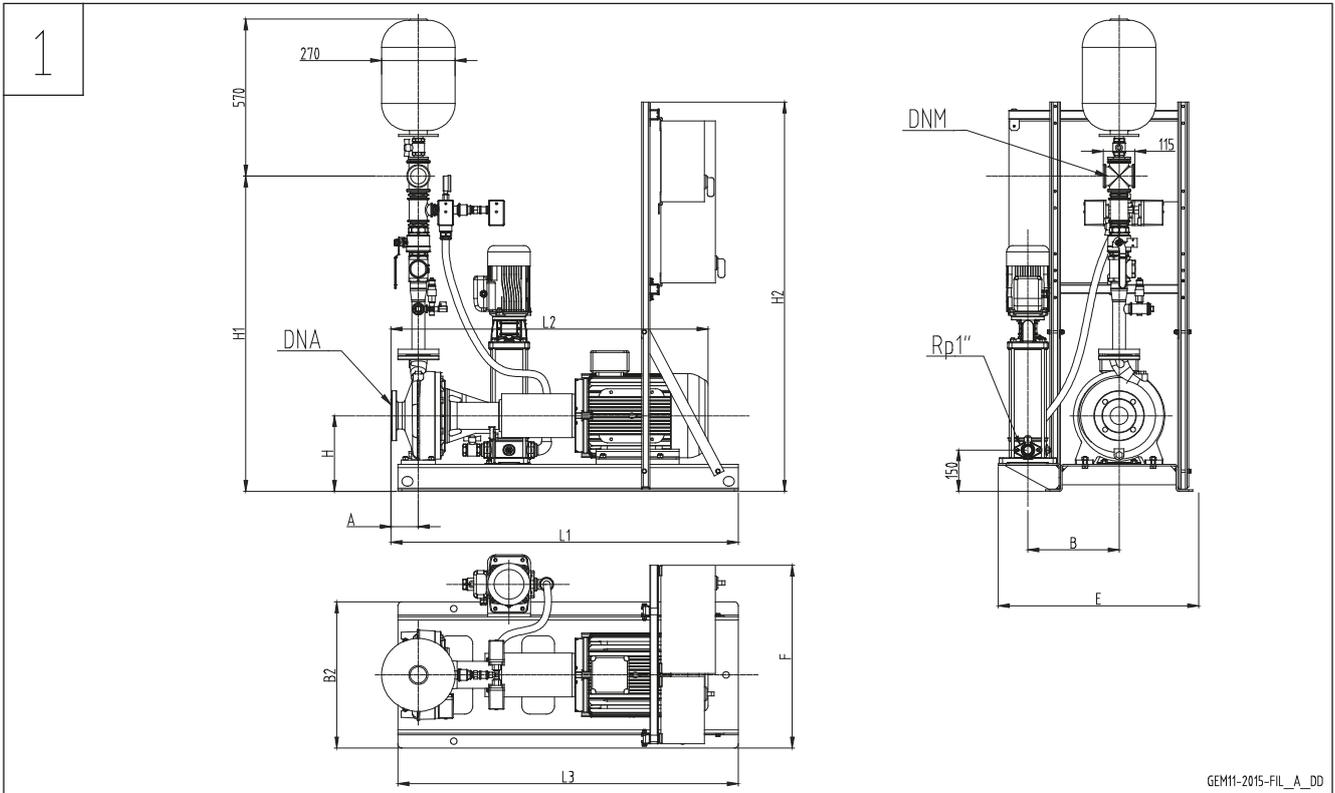

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pump 3 x 400 Vac  $\pm$  10%.
  - Jockey pump 3 x 400 Vac  $\pm$  10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:** 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pump IP54.
  - Jockey pump IP55
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..).
- **Maximum power output:**
  - Electric service pump 132 kW.
- **Horizontal electric service pump:**
  - NSCC series (motor protection grade IP55).
- **Vertical jockey pump:**
  - 1SV series version T or 1VM series (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gem11\_nsc100\_c\_td

Up to 55 kW, wall-mounted electric control panel for service pump, 1 support bracket kit available on request.

Over 55 kW, floor-mounted electric control panel for service pump.

Wall-mounted electric control panel for jockey pump, 1 support bracket kit available on request.

**EN 12845**  
**fire-fighting**  
**pressure**  
**module**

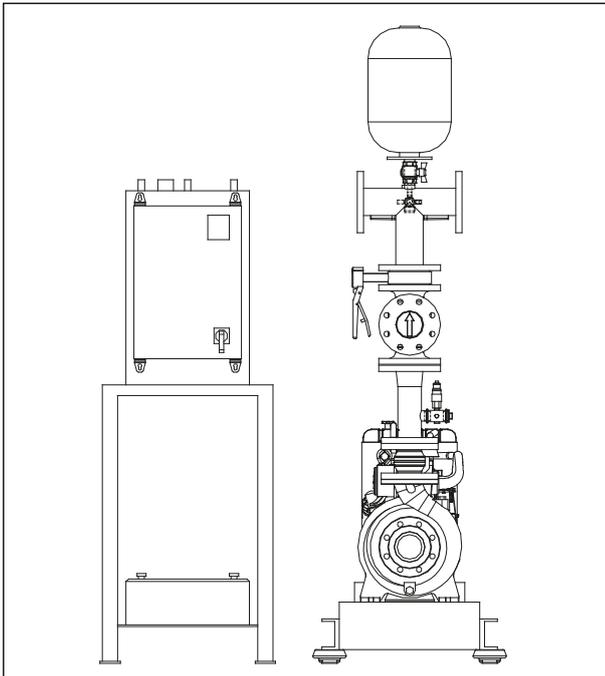

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEMK..NSCC**  
**series**  
**Single diesel engine service**  
**pump module**

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Diesel engine service pump 1 x 230 Vac  $\pm$  10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:**
  - 12 – 24 Vac.
- **Control panel protection grade:**
  - Diesel engine service pump IP54.
- **Electric motor starting:** from batteries.
- **Maximum power output:**
  - Diesel engine service pump 200 kW.
- **Horizontal electric service pump:**
  - NSCC series.
- **Maximum operating pressure:** 16 bar.

**EN 12845  
fire-fighting  
pressure  
module**

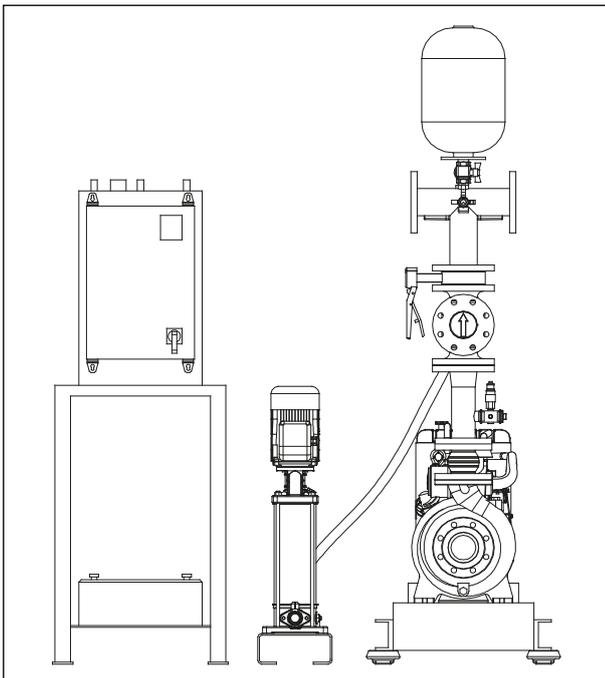

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEMK..NSC series + JOCKEY KIT  
Single diesel engine service pump module,  
with electric jockey pump kit**

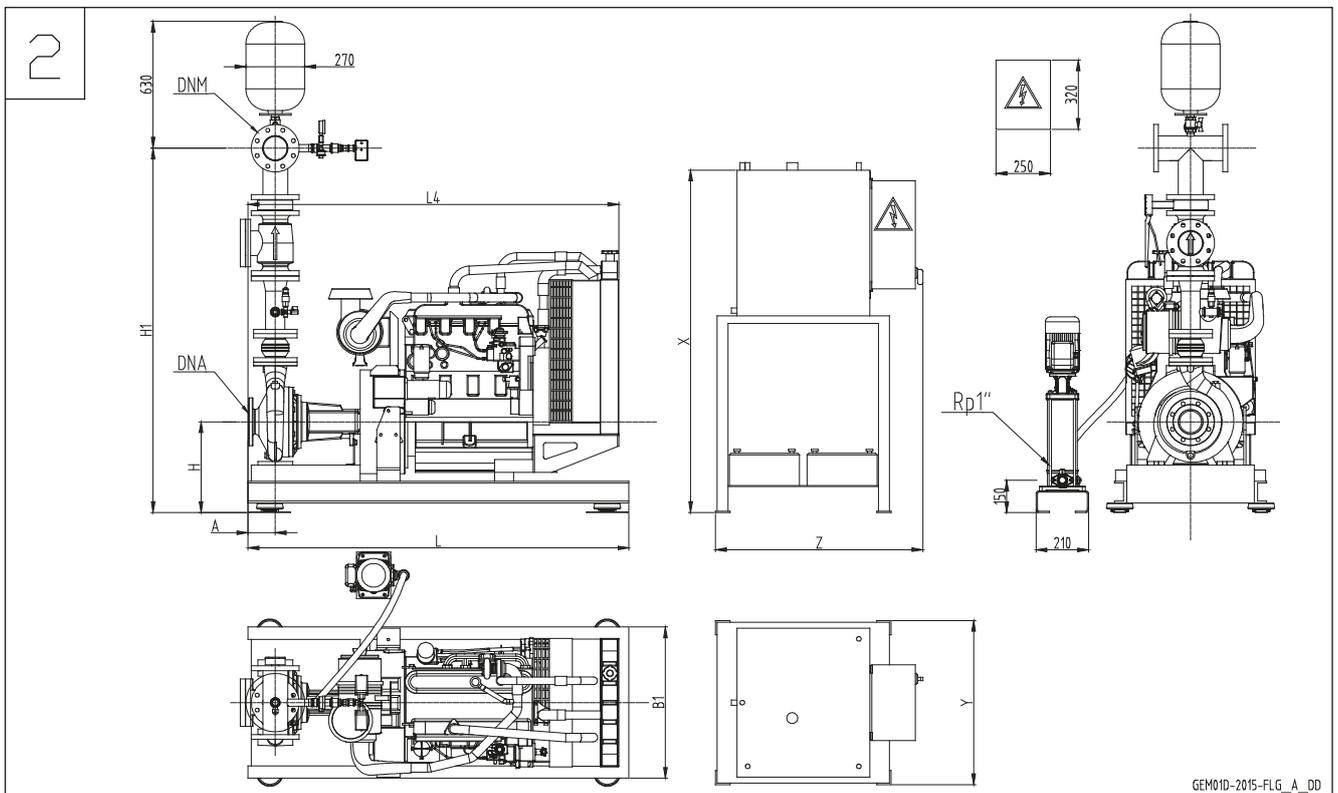

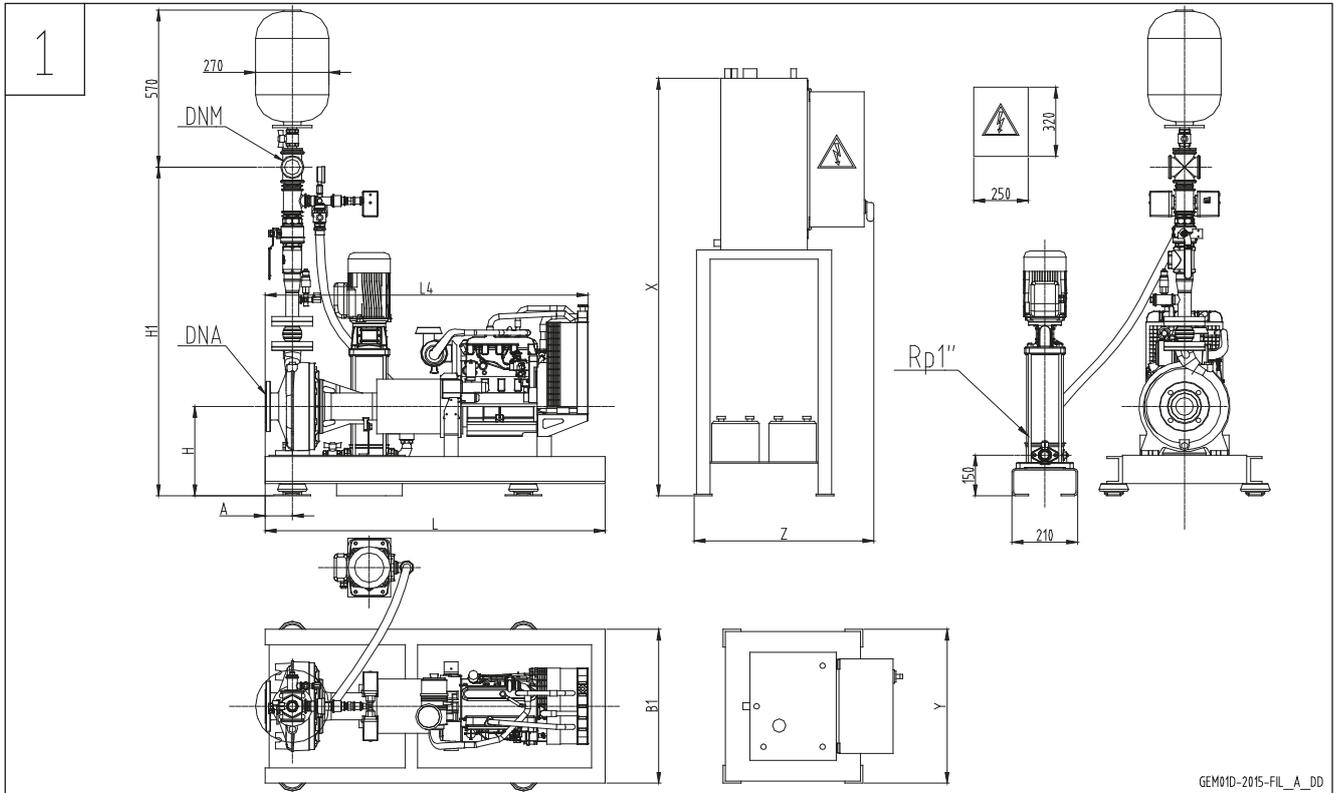

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Diesel engine service pump 1 x 230 Vac ±10%.
  - Jockey pump 3 x 400 Vac ±10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:** 12 – 24 Vac.
- **Control panel protection grade:**
  - Diesel engine service pump IP54.
  - Jockey pump IP55
- **Diesel engine starting:** from batteries
- **Maximum power output:**
  - Diesel engine service pump 200 kW.
- **Horizontal electric service pump:**
  - NSC series.
- **Vertical jockey pump:**
  - 1SV series version T or 1VM series (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

gem01d\_nsc100\_a\_td

**EN 12845  
fire-fighting  
pressure  
module**

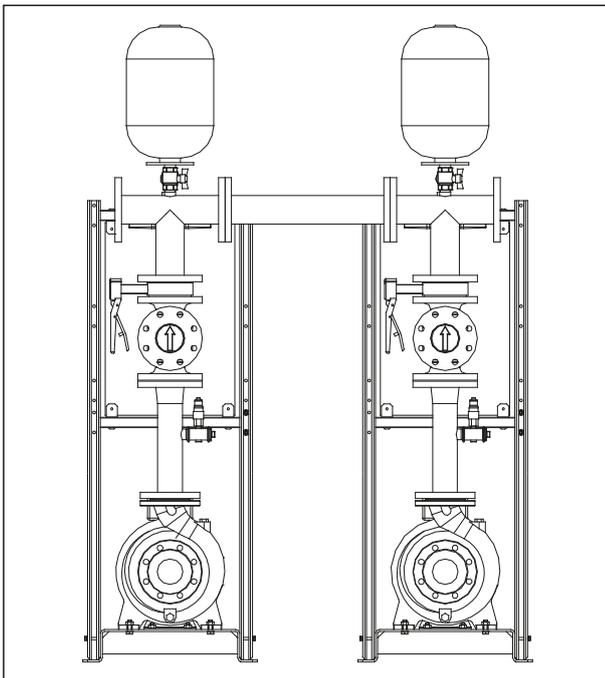

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEM..NSCC + GEM..NSCC  
Series**

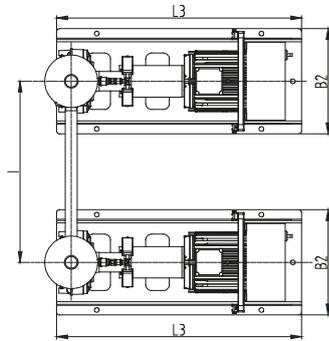

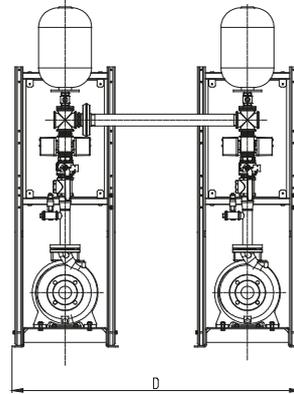

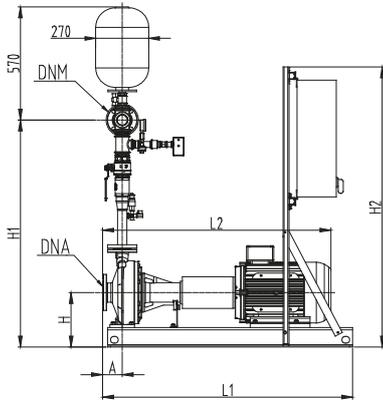

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h for each service pump
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pumps 3 x 400 Vac ±10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:**
  - 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pumps IP54.
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..)
- **Maximum power output:**
  - Electric service pumps 200 kW.
- **Horizontal electric service pump:**
  - FHF series (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gem20\_nsc100\_c\_td

Up to 55 kW, wall-mounted electric control panels for service pumps, 2 support bracket kits available on request.

Over 55 kW, floor-mounted electric control panels for service pumps.

**EN 12845  
fire-fighting  
pressure  
module**

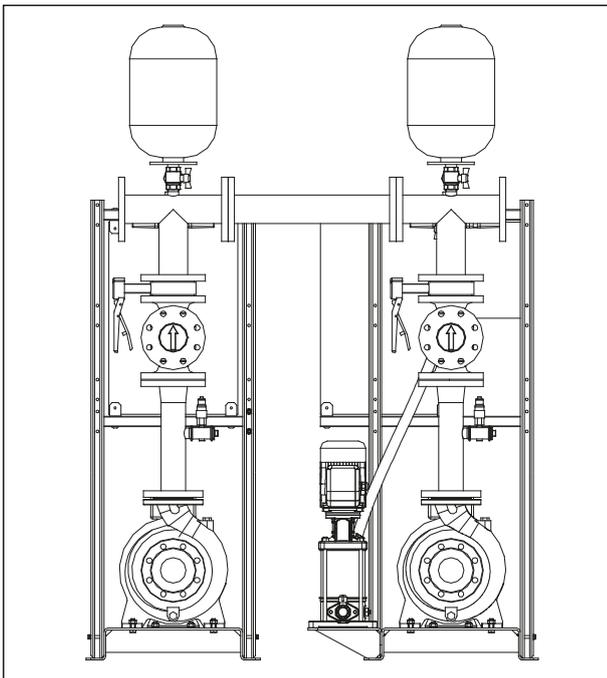

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEM..J..NSCC + GEM..NSCC  
Series**

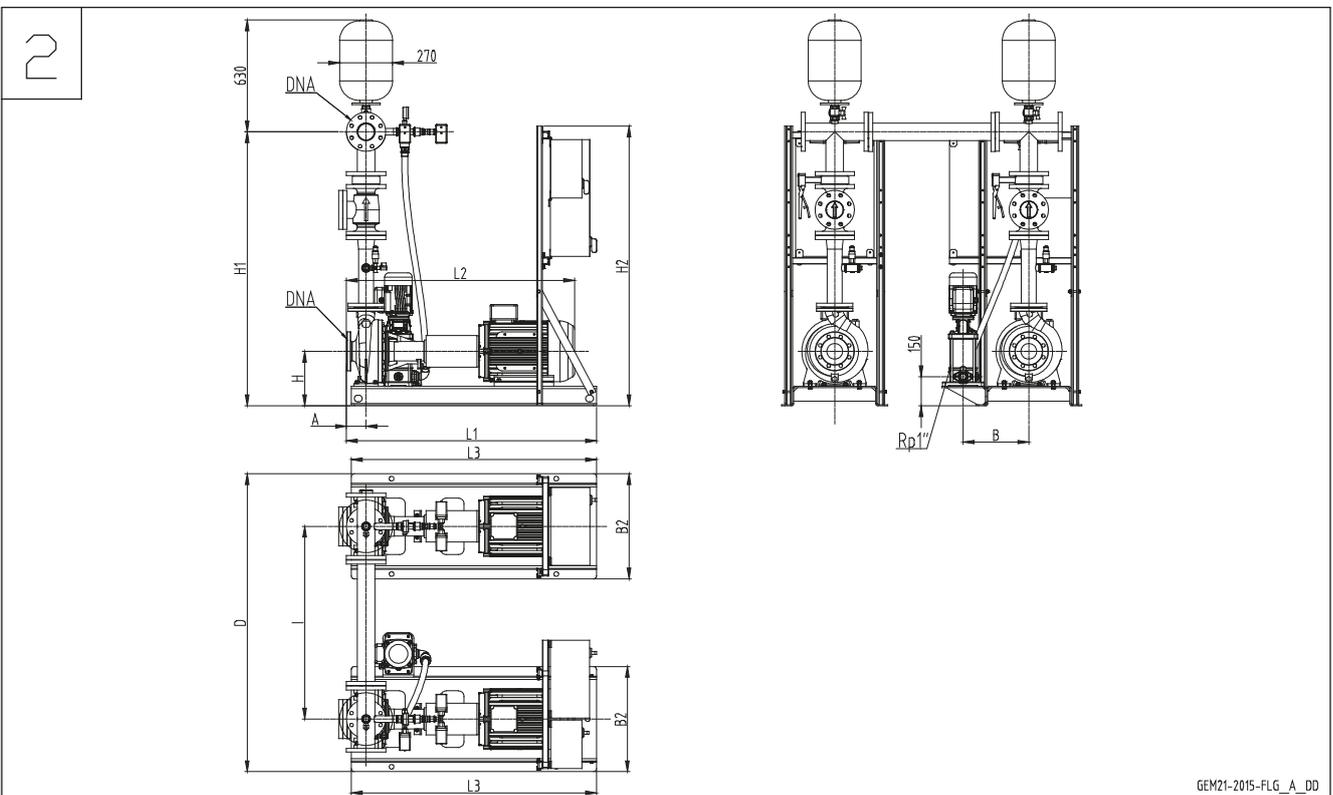

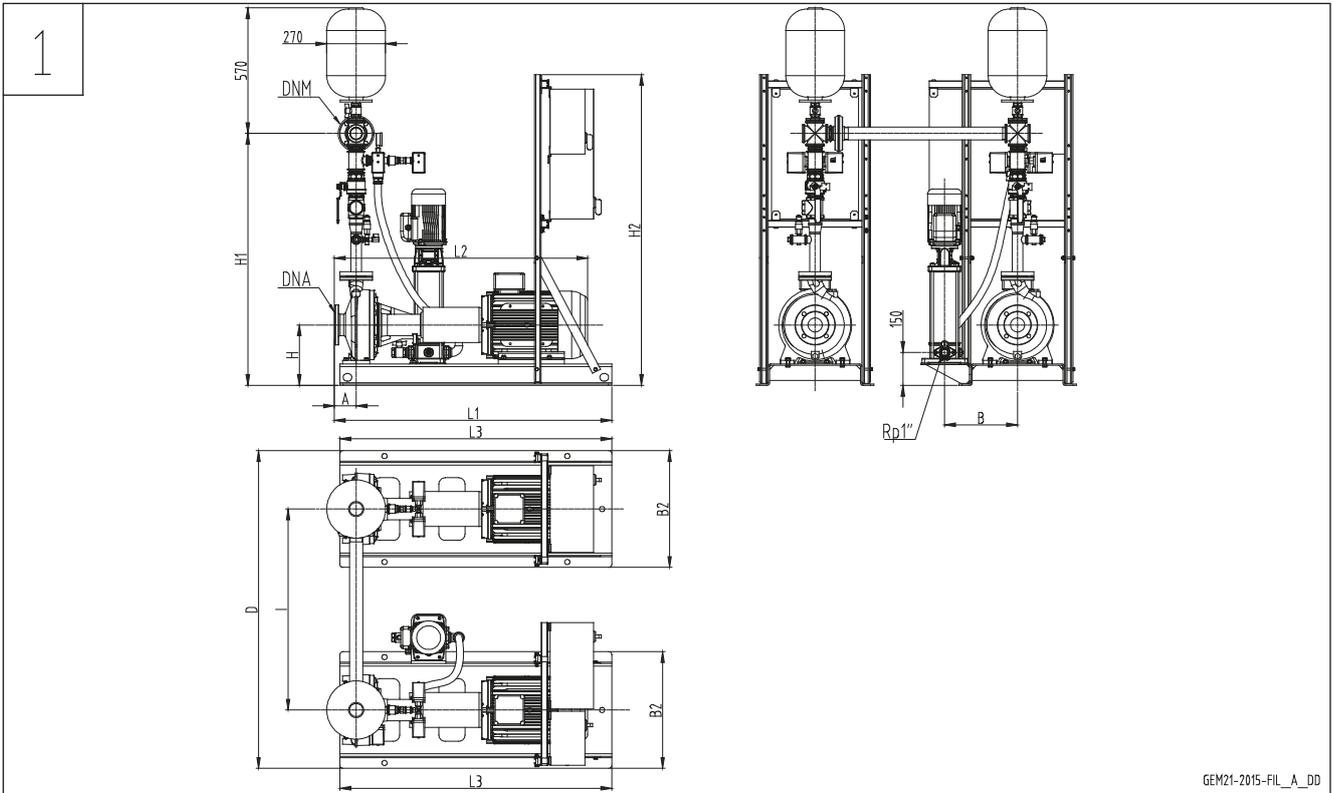

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h for each service pump
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pump 3 x 400 Vac ± 10%.
  - Jockey pump 3 x 400 Vac ± 10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:** 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pump IP54.
  - Jockey pump IP55.
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..).
- **Maximum power output:**
  - Electric service pumps 200 kW.
- **Horizontal electric service pump:**
  - NSCC series (motor protection grade IP55).
- **Vertical jockey pump:**
  - 1SV series version T or 1VM series (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gem21\_nsc100\_b\_td

Up to 55 kW, wall-mounted electric control panels for service pumps, 2 support bracket kits available on request.

Over 55 kW, floor-mounted electric control panels for service pumps.

Wall-mounted electric control panel for jockey pump, 1 support bracket kit available on request.

**EN 12845  
fire-fighting  
pressure  
module**

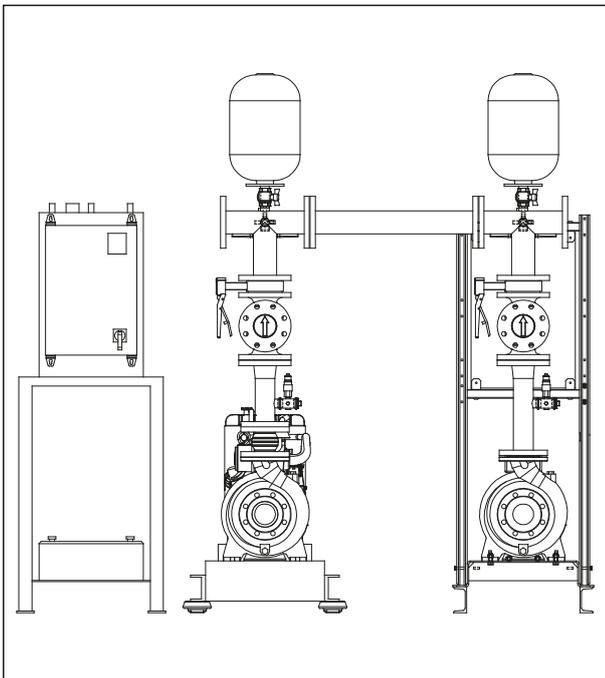

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEM..NSCC + GEMK..NSC  
Series**

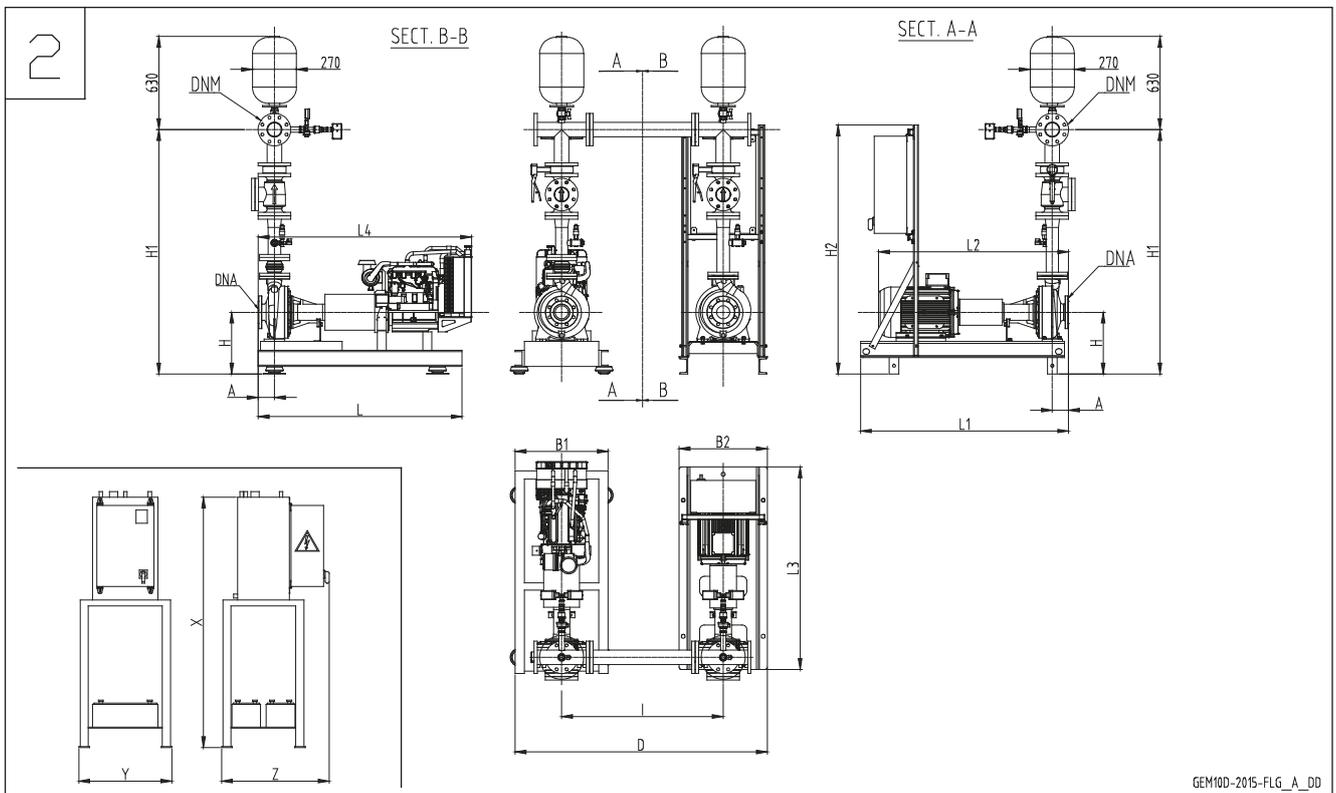

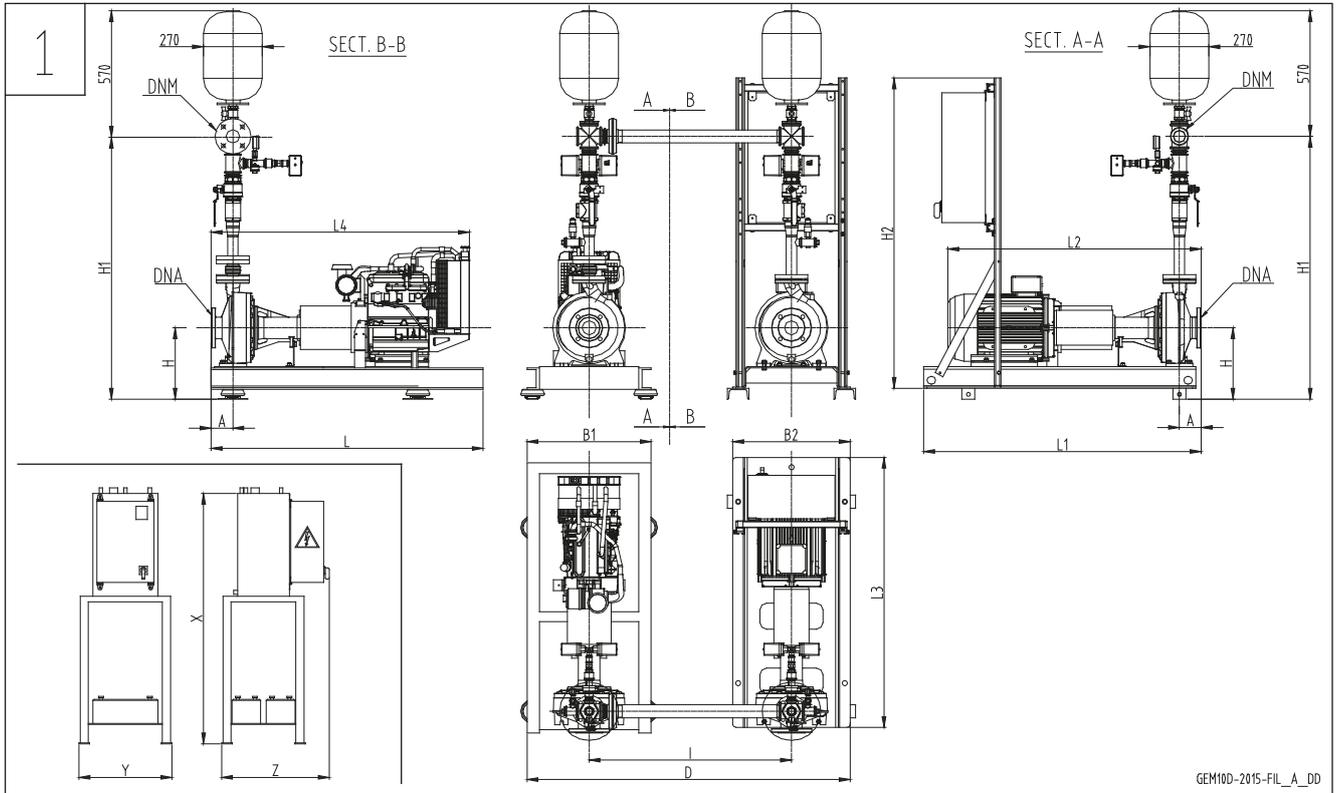

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h for each service pump
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pump 3 x 400 Vac ± 10%.
  - Diesel engine service pump 1 x 230 Vac ± 10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:** 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pumps IP54.
  - Diesel engine service pump IP54
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..).
- **Maximum power output:**
  - Electric service pumps 200 kW.
  - Diesel engine service pump 200 kW.
- **Horizontal electric service pump:**
  - NSCC series (motor protection grade IP55).
- **Horizontal diesel engine service pump:**
  - NSC series.
- **Maximum operating pressure:** 16 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gem10d\_nsc100-125\_a\_td

Up to 55 kW, wall-mounted electric control panel for service pump, 1 support bracket kit available on request.

Over 55 kW, floor-mounted electric control panel for service pump.

**EN 12845  
fire-fighting  
pressure  
module**

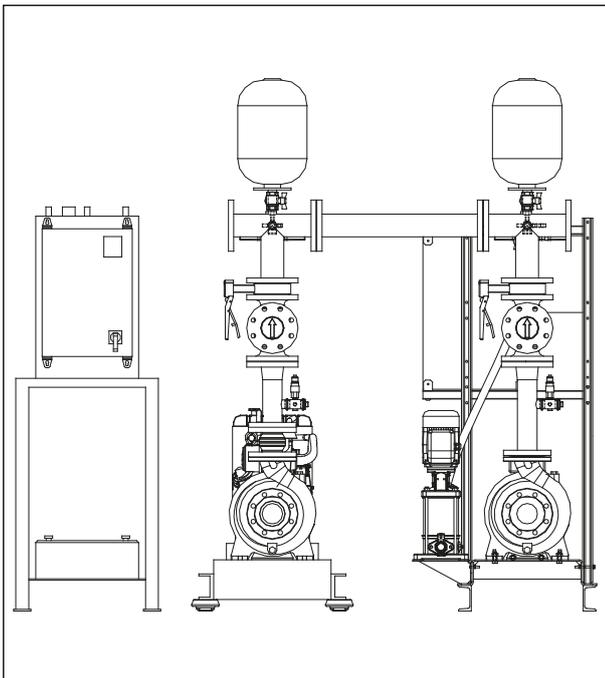

**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Automatic fire-fighting networks and systems (Sprinkler).

**GEM..J..NSCC + GEMK..NSC  
Series**

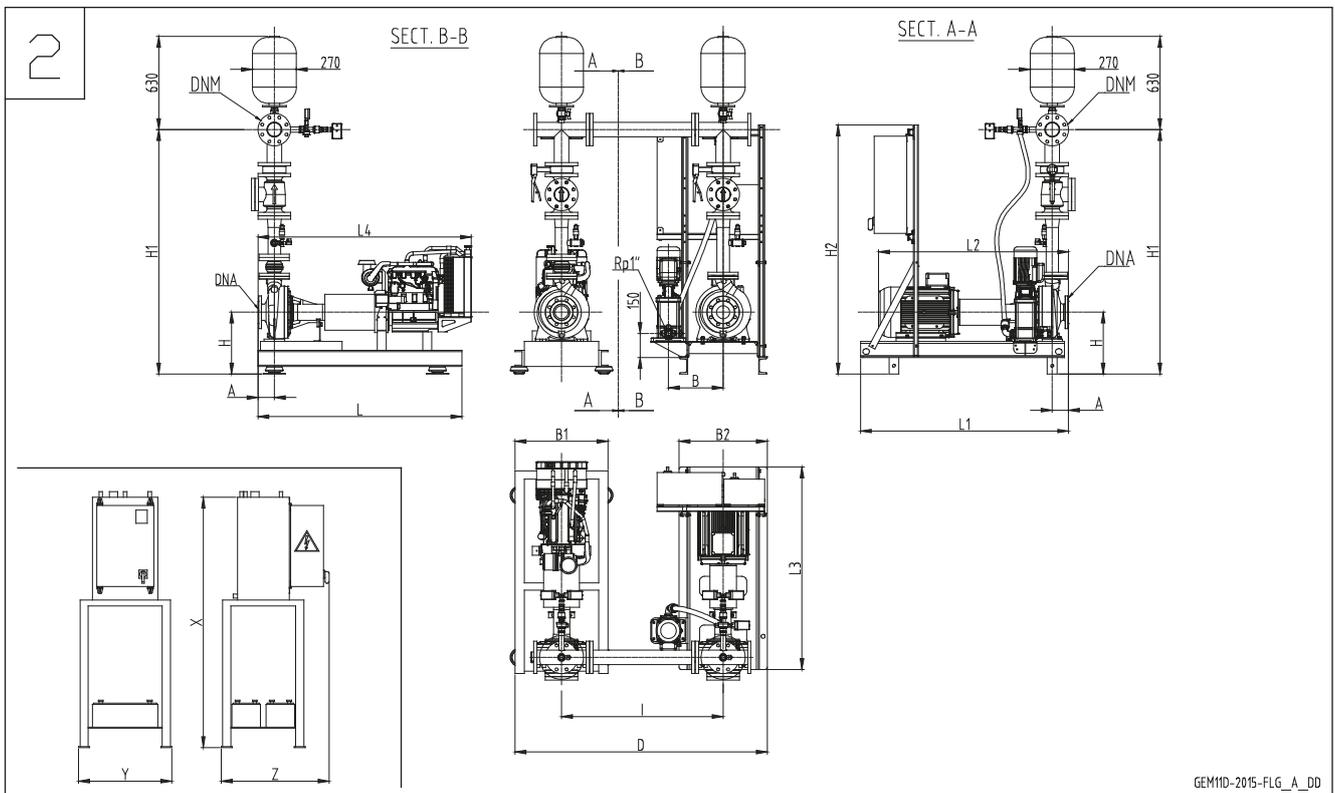

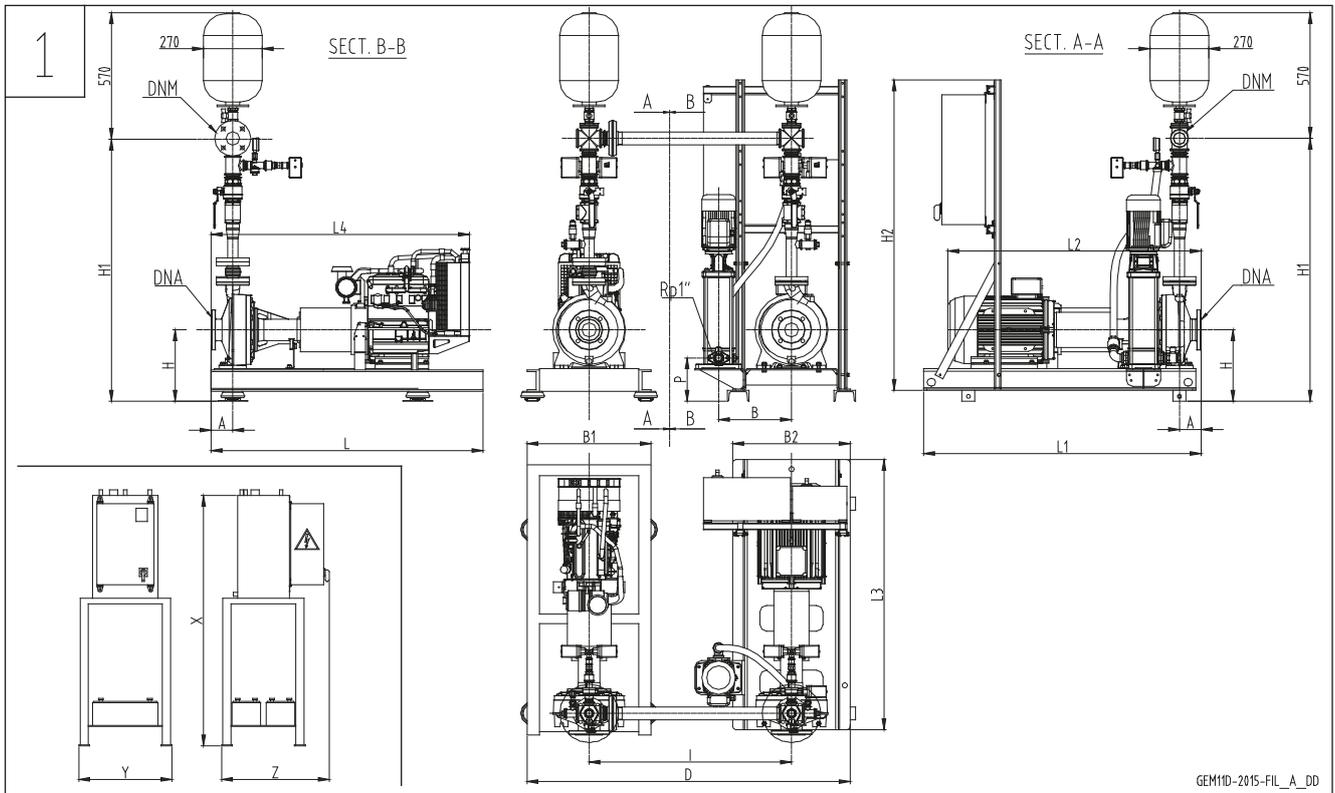

**SPECIFICATIONS**

- **Flow:** up to 766 m<sup>3</sup>/h for each service pump
- **Head:** up to 146 m.
- **Control panel input voltage:**
  - Electric service pump 3 x 400 Vac ± 10%.
  - Diesel engine service pump 1 x 230 Vac ± 10%.
  - Jockey pump 3 x 400 Vac ± 10%.
- **Frequency:** 50 Hz.
- **Voltage of controls outside panel:** 12 – 24 Vac.
- **Control panel protection grade:**
  - Electric service pump IP54.
  - Diesel engine service pump IP54.
  - Jockey pump IP55.
- **Electric motor starting:**
  - Direct (DOL) for power ratings up to and including 22 kW (GEMD...).
  - Star/Triangle from 30 kW up (GEMY..).
- **Diesel engine starting:** from batteries
- **Maximum power output:**
  - Electric service pumps 200 kW.
  - Diesel engine service pump 200 kW.
- **Horizontal electric service pump:**
  - NSCC series (motor protection grade IP55).
- **Horizontal diesel engine service pump:**
  - NSC series.
- **Vertical jockey pump:**
  - 1SV series version T or 1VM (motor protection grade IP55).
- **Maximum operating pressure:** 16 bar.

# PERFORMANCE CURVES

## EN 12845 PRESSURE MODULES GEM..NSC SERIES PERFORMANCE CURVES AT 50 Hz, 2 POLES

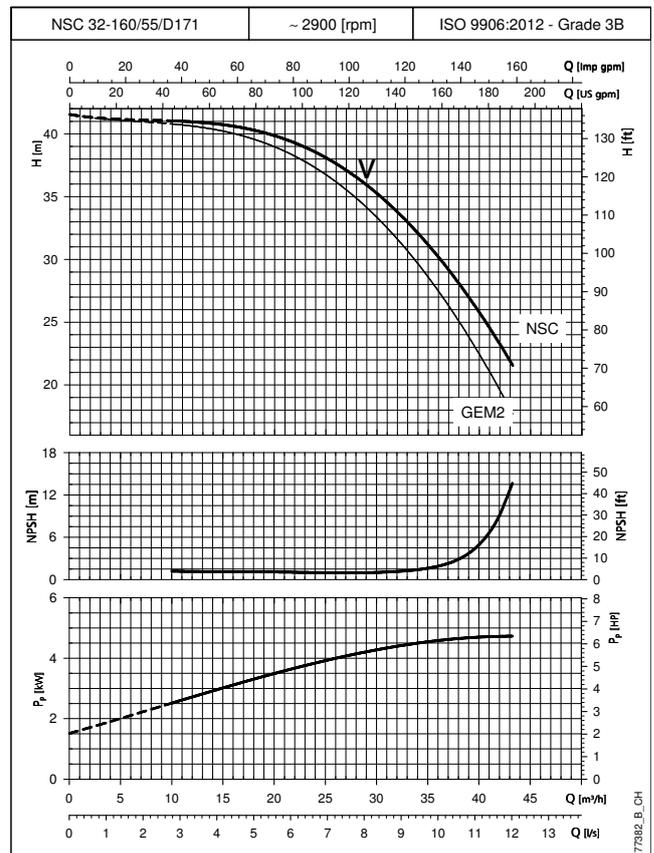

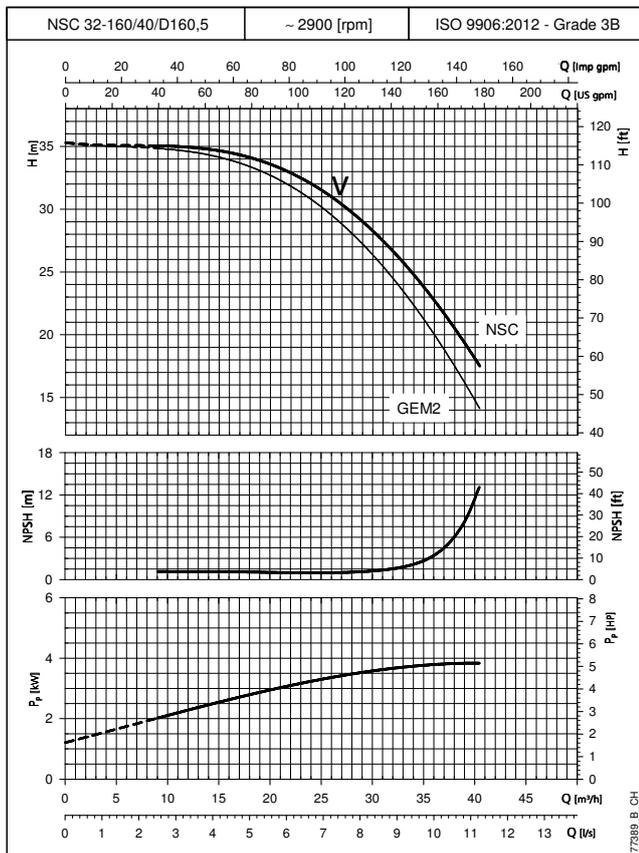

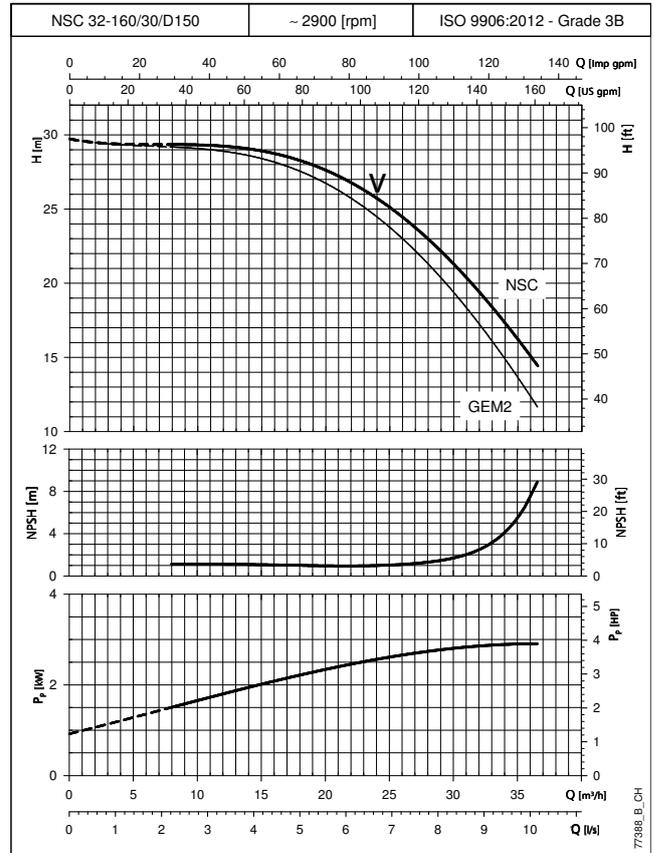

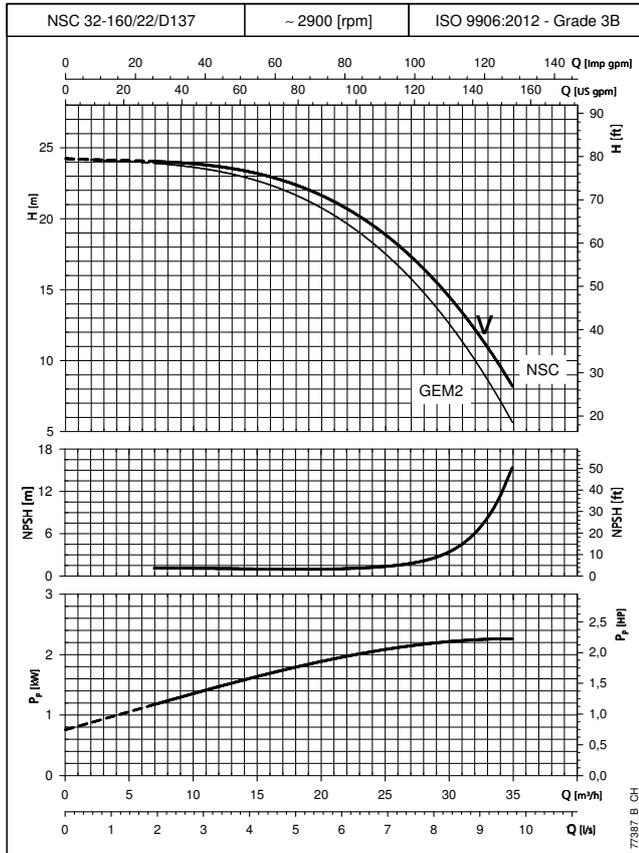

CURVES

GEM1, GEM2, GEM3 = pressure module hydraulic performance. NSC = pump hydraulic performance without drops.

V = Pre-calculated systems limit selection HHP-HHS (10.7.2 EN 12845). These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ . The NPSHr values required for the service pump were obtained in the laboratory. When using them for EN 12845 fire-fighting systems, increase the value by 1 m.

## JOINING PIPE KIT

The single modules according to UNI EN 12845 are supplied separately so that they can be combined according to system requirements.

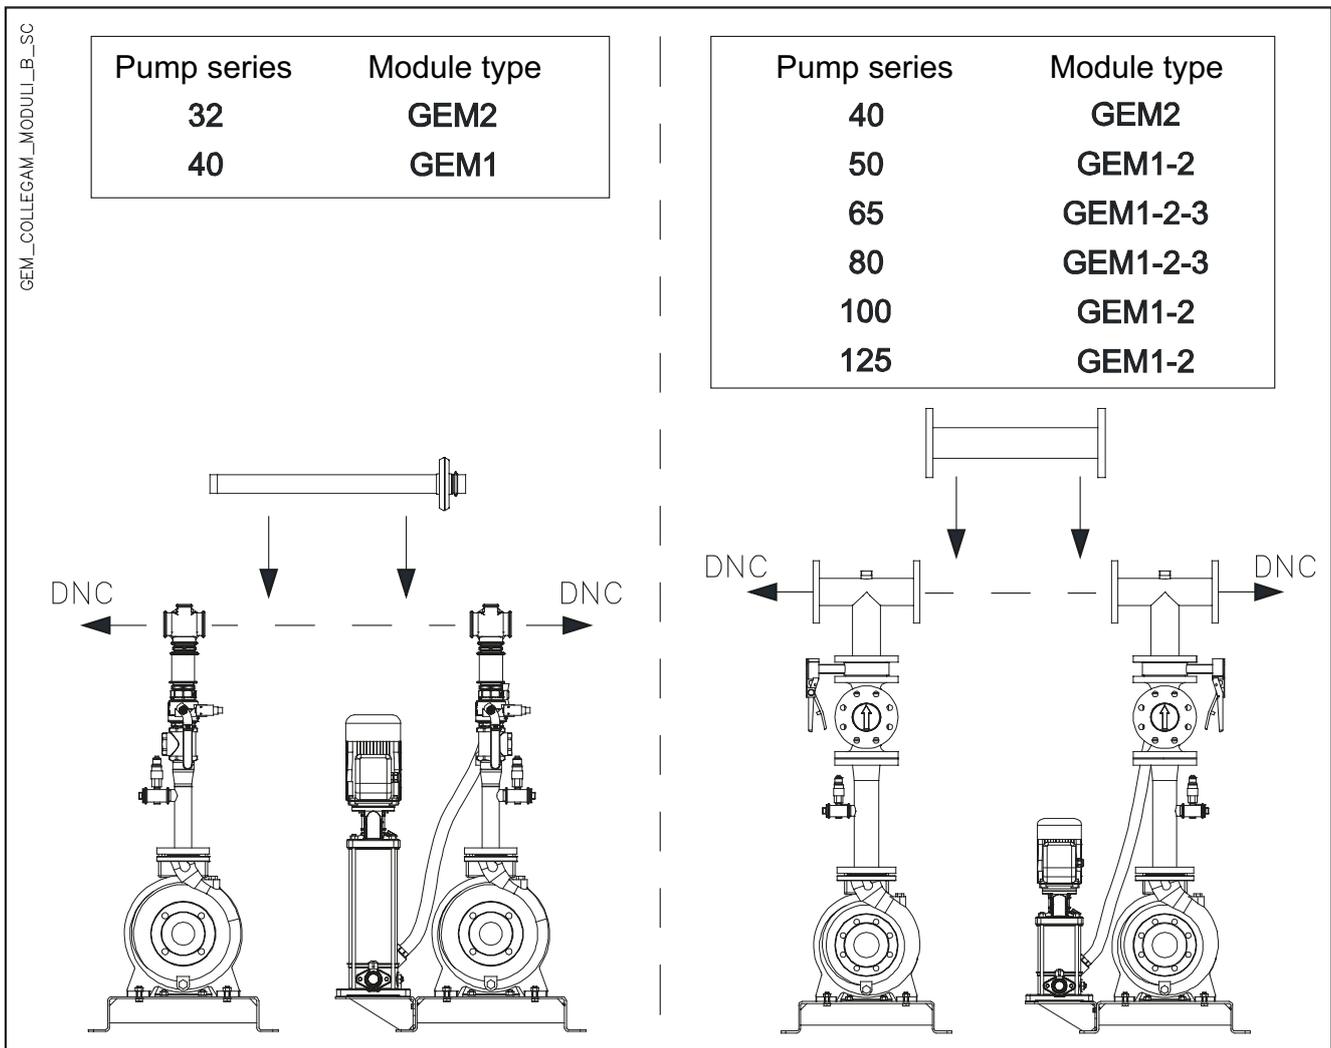

By combining the modules, in fact, the water supply specifications described in EN 12845 can be obtained. These water supplies can be single, superior, duplicated or combined. Fire-fighting modules are generally fitted with two main service pumps, one backing up the other.

The choice of electric motors or diesel engines depends on the level of reliability required from the system.

The firefighting modules can be combined through joining kits in order to reproduce the required water supply configuration for the fire-fighting system.

The connector kits act as hydraulic connections, are mounted between the two chosen modules and are sized for two running pumps; they are flexible and allow many different possibilities of connection to the system, to the flow meter, to the tanks and to all the other pipes.

They comprise a crosshead and include two connectors for the two modules.

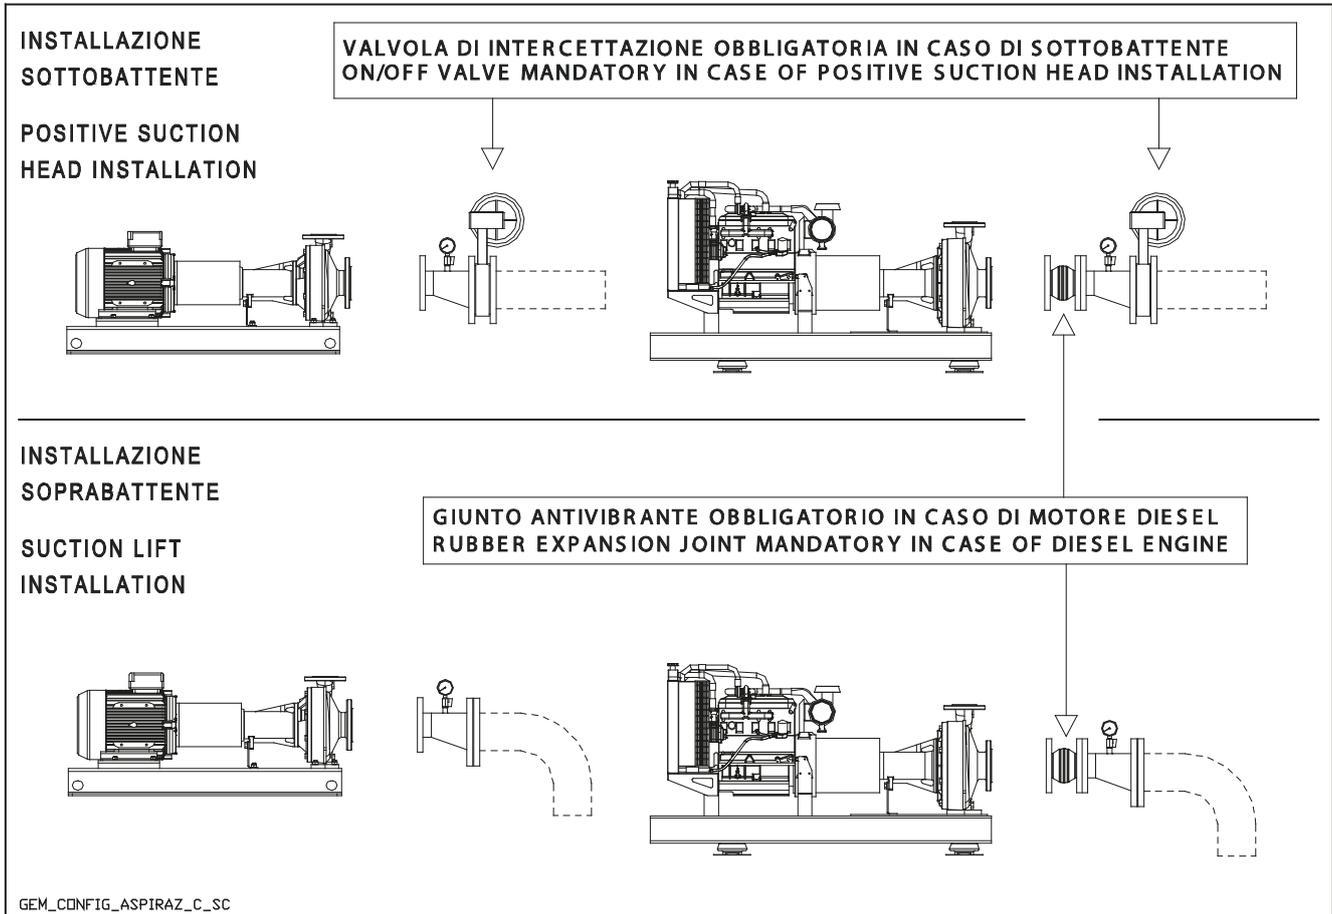

## TABLE OF COMBINATIONS FOR JOINING KITS

## SUCTION SIDE KITS

The EN 12845 fire-fighting pressure modules are supplied without valves and stubs on the suction side of the service pump and can be completed with suitable kits according to the requirements of the standard. These requirements are expressed by EN 12845 (chapter 10.5 and chapter 10.6) and are connected with the maximum speed of the water in the pipes, their minimum cross-section and the type of installation, suction lift or positive suction head.

In case of suction lift installation the Cone kit must be used, and the On/off valve kit is optional. For positive suction head installation the On/off valve kit is mandatory (according to EN12845, chapter 10.5), than the Cone kit must be used together with the On/off valve kit. For diesel engines the Rubber expansion joint kit is mandatory. The Cone kit is equipped with:

- Eccentric cone or flanged stub pipe.
- Vacuum pressure gauge with relative 1/4" shut-off valve.
- Welding flange.

The On/off valve kit is equipped with:

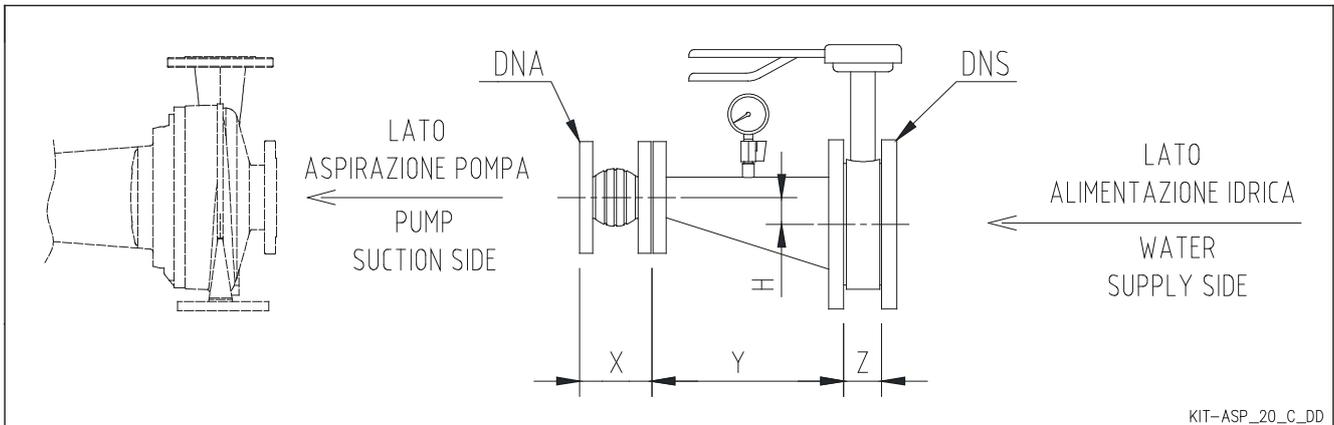

- On/off butterfly valve (optional for suction lift installations) with lever handle for diameters up to DN100, butterfly valve with handwheel and reducer for DN125 and higher.  
(Valve lock kit and device for monitoring ON/OFF status available on request).

The Rubber expansion joint kit is equipped with:

- rubber joint that must be fixed to the pump suction side, mandatory in case of diesel engine.

The following table summarises the pump type installed on the fire-fighting sets and the kit that corresponds to the installation type.

## FLOW METER KIT

The flow meter is supplied in kit form. EN 12845 requires the presence of a flow meter to check hydraulic performance during the test stage and during periodic inspections. The kit includes:

- Direct reading flow meter.
- On/off ball valve for diameters up to 2" inclusive, butterfly valve with lever handle from DN65 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above. (Valve lock kit and device for monitoring ON/OFF status available on request).
- Connection piping and straight piping upline from the flow meter.

The flow meter is available in various sizes according to the flow of a service pump and can be connected to the pump delivery line. For a correct match, identify the type as shown in the set dimensions tables. The flow meter must be installed, where possible, in a stretch of piping with a steady flow and sufficient back pressure at the discharge outlet.

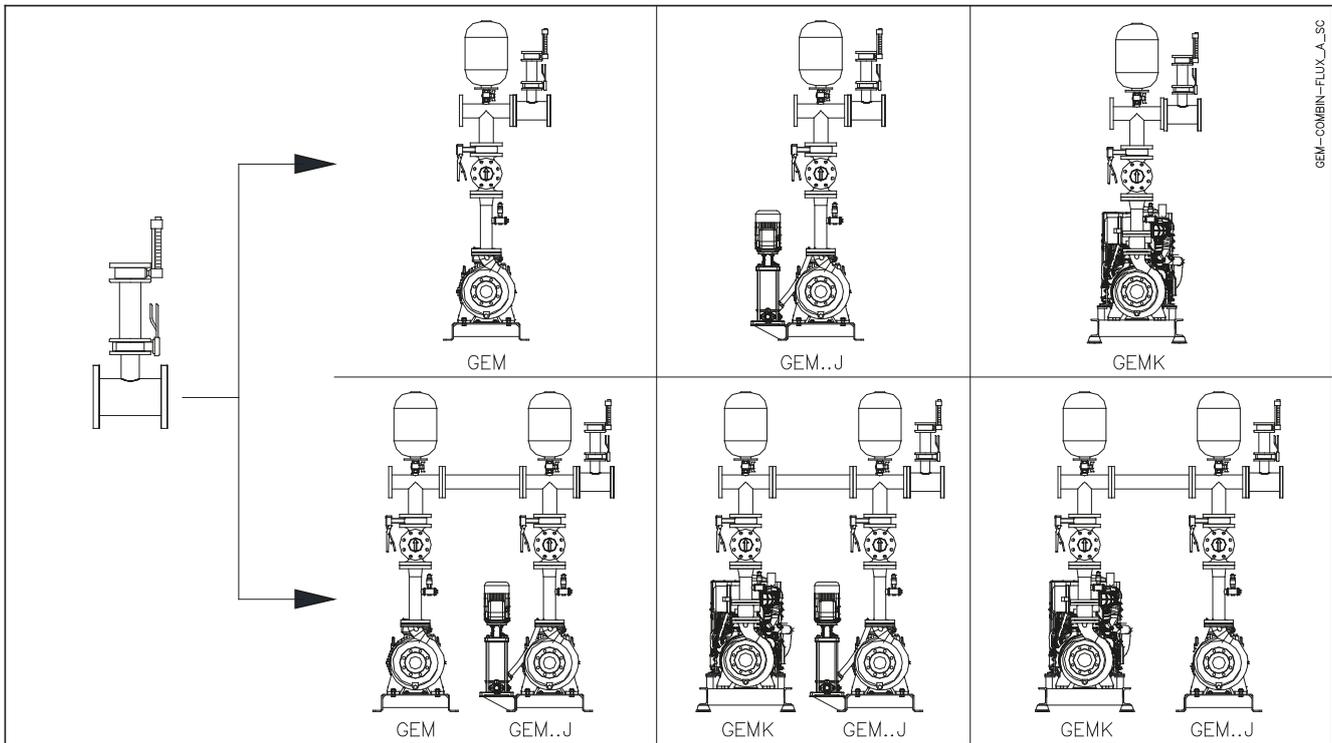

The fitter must assemble the discharge piping towards the tank or discharge outlet.

**ACCESSORIES**

## PRIMING TANK

The priming tank is used in suction lift installations and carries out the function of maintaining the pump body and suction pipe full of water even if there are leaks through the bottom valve.

Each pump must have its own independent priming tank, placed at a higher level than the pump. The tank must be connected to a water source for adding water and keeping it full. The diameter of the connecting pipe to the pump depends on the use class. The return piping for re-circulation can be connected to the tank, which must also feature an overflow drain.

A level switch automatically activates the service pump if the level of the tank drops and is not reintegrated. The hydraulic connections must be made by the fitter.

The horizontal 500 L tank is made of galvanised steel.

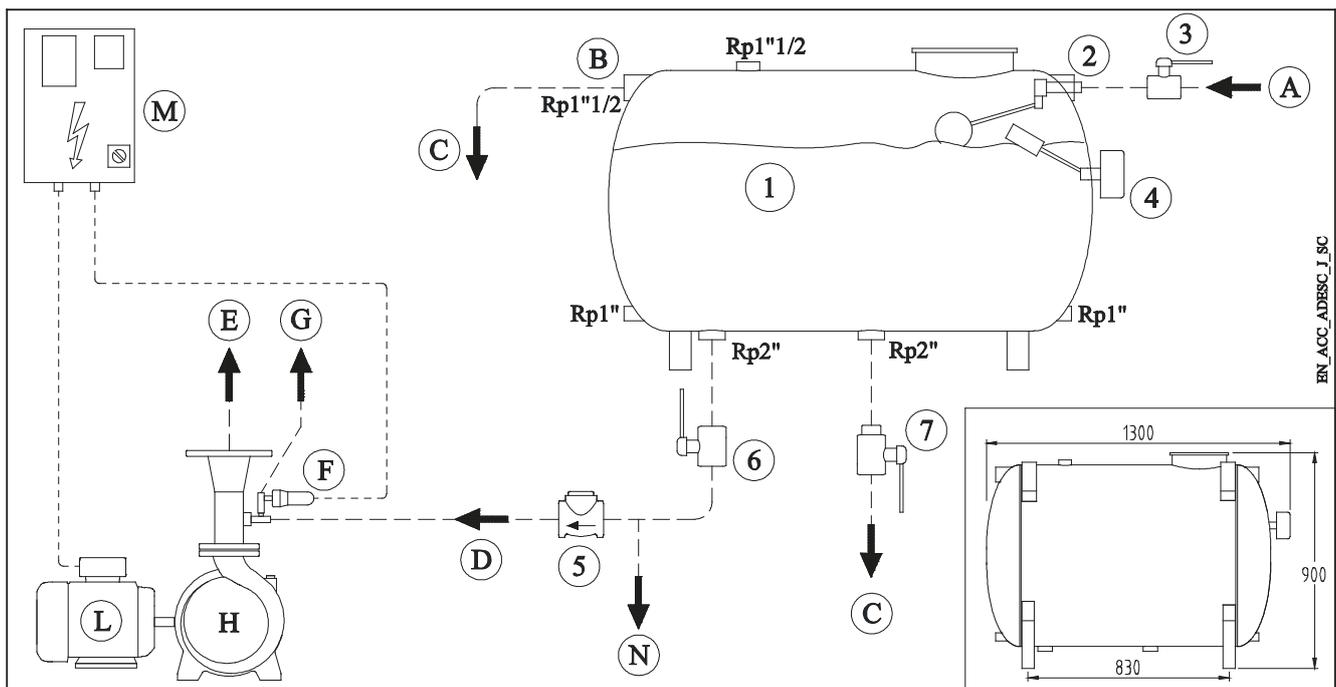

## ACCESSORIES KIT FOR PRIMING TANK

The accessories kit includes:

- Filling and discharge valves, reductions, non-return valve.
- Float switch tap complete with ring nut for fixing to the tank through-hole.
- Level indicator to connect to the electric panel and assembly instruction sheet.

75, 100, 150 and 200 cm high tank supports are available on request.

Example of connection to the tank and accessories:

N°	DESCRIPTION	N°	DESCRIPTION
1	Priming tank *	C	Drain
2	Floating valve *	D	Connection to trunk of main service pump
3	In flow on-off 1" ball valve *	E	To trunk main
4	4 Low level switch *	F	Pressure switch
5	Priming supply 2" non return valve *	G	To priming tank
6	Priming supply 2" on-off ball valve, always open *	H	Pump
7	Drain 2" ball valve *	L	Motor
A	In flow	M	Main electric pump control panel
B	Over flow	N	Possible priming jockey pump

\* items included on kit

En-acc-adesc\_c\_tc

## ELECTRIC JOCKEY PUMP KIT

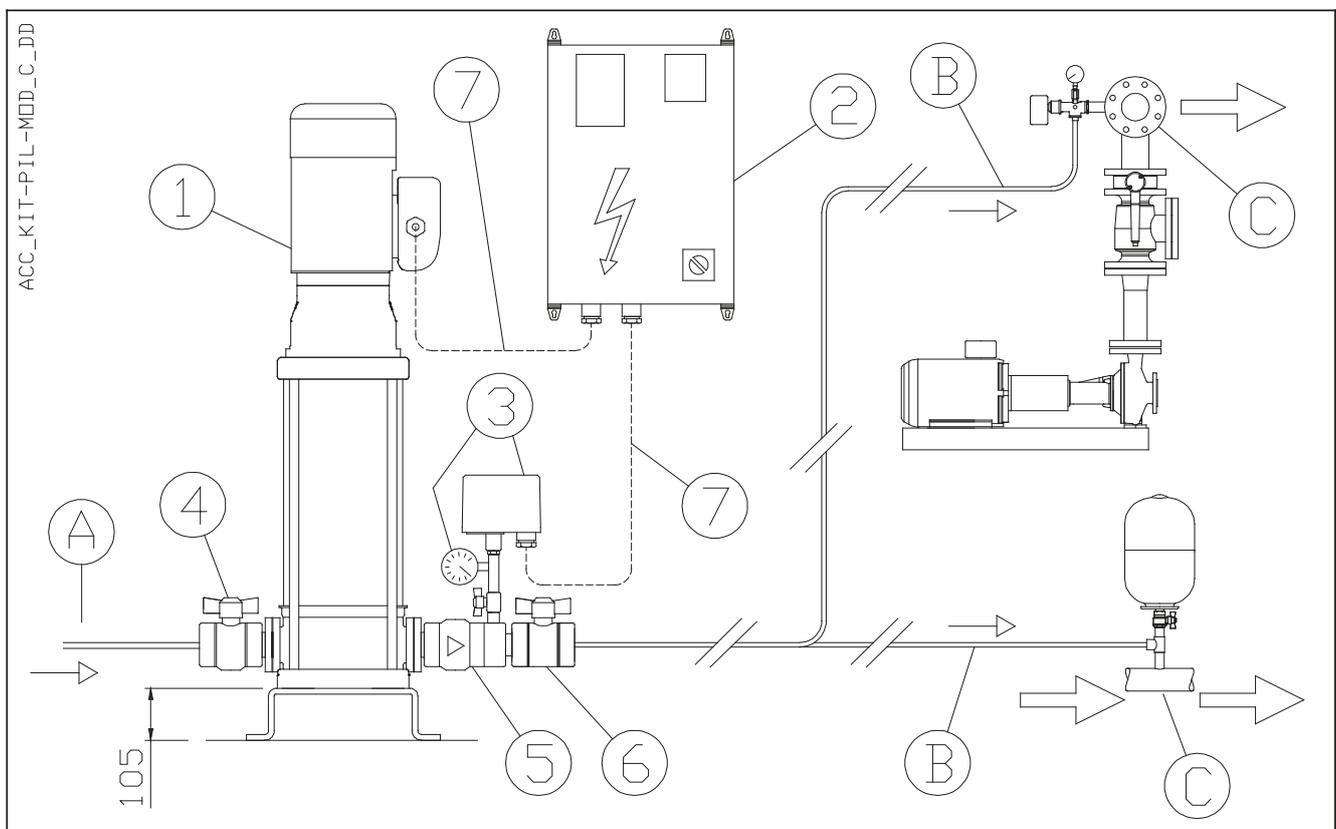

The jockey pump or compensation pump has the job of keeping the system under pressure and compensating for any small losses without the intervention of the service pumps. In fact, the jockey pump is commanded by an automatic shut-off panel.

The kit includes:

- the hydraulic components for installing the electric pump (base, valves, pressure switch, pressure gauge).
- the pre-chosen electric pump and the relative electric panel with 5 m long cables.

The hydraulic connection to the module can be easily made using the standard union on each module, as shown in the following example. Kits are available for the vertical electric jockey pumps 1SV or 1VM series; kits for other e-SV or VM electric pump models are available on request.

The diagram illustrates some connection examples:

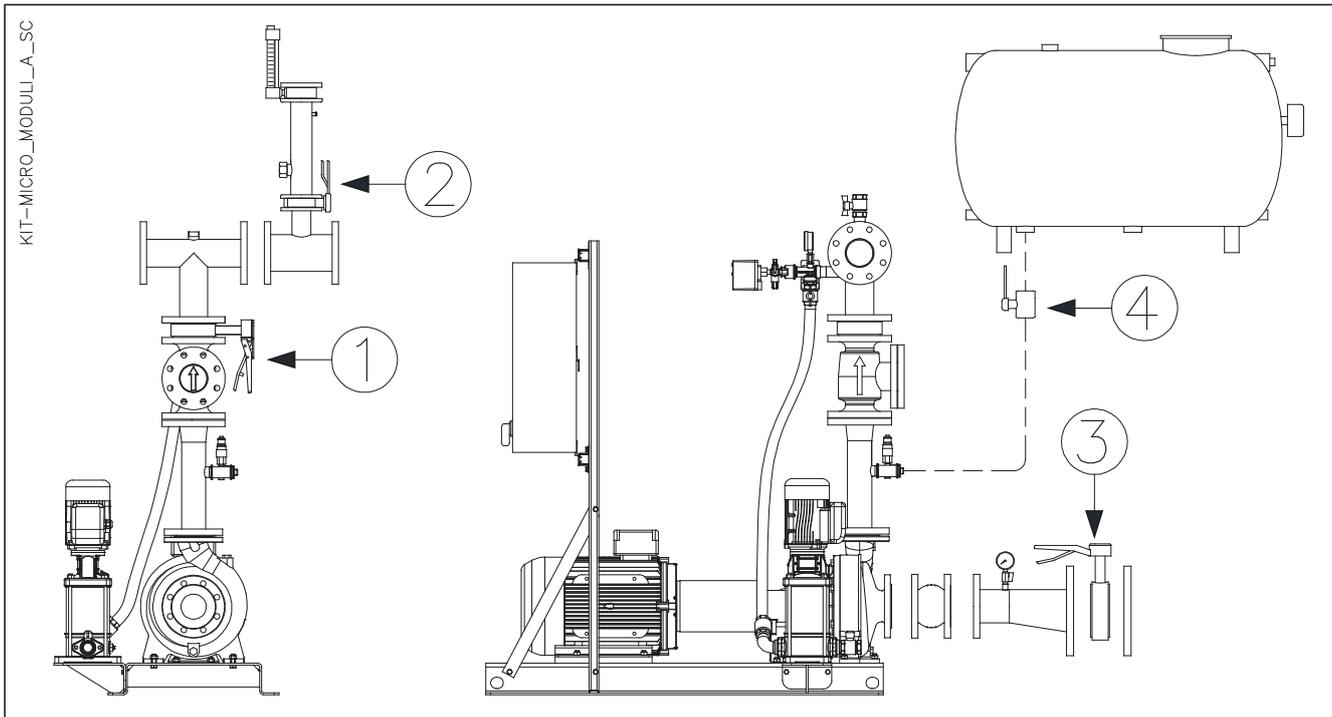

N°	DESCRIPTION
1	Jockey electric pump
2	Command panel for jockey pump
3	Pressure switch and pressure gauge
4	Ball valve on suction side
5	Non return valve
6	Ball valve on delivery side
7	Electric cables, 5 metres
A	Suction side connection
B	Pipe connection from delivery side of the jockey pump to main trunk
C	Main trunk

P.S: 1,2,3,4,5,6,7 are included on kit

gem\_acc\_kit-pil\_b\_tc

## MICRO KIT FOR ON/OFF VALVES

The micro kit is available as an accessory. It's an electro-mechanical device capable of monitoring the status of the valve. It includes the limit switch that allows you to control the open or closed state of the valve, depending on the function associated with it. The electrical signal is connected to QAL12845 control panel, as stated in paragraphs D.3.4 and H.2 of the EN 12845 Standard. The micro kit can be installed in four different points of the system: on-off valve on delivery side, on the valve of the flow meter kit, on the valve of the pump on suction side and on the on/off valve of the priming kit.

POSITION	MICRO KIT TYPE	DESCRIPTION	STATUS

## ELECTRICAL ALARMS PANEL QAL12845

Electric panel for remote status and alarm monitoring of one or two Lowara pumps installed in GEM fire-fighting pressure modules, according to EN12845.

In the electric service pump mode, the following conditions are visualised:

- Mains power supply to motor.
- Pump start-up request.
- Pump running.
- No start-up.

Additionally: minimum suction tank level, minimum priming tank level, on-off valve on suction and delivery side not fully open. The valves are complete with a status monitor.

In the diesel engine service pump mode, the following conditions are indicated, as required by EN12845:

- Diesel engine pump control panel mode selector in non-automatic position.
- Diesel engine fails to start after 6 attempts.
- Pump running.
- Controller fault.

Additionally: minimum fuel or suction tank level, minimum priming tank level, on-off valve on suction and delivery side not fully open.

The valves are complete with a status monitor.

All the above conditions, required by EN12845, are indicated with signal LED's and buzzers. A buzzer alarm reset button and LED tester button are included.

Quadro QAL12845

The control unit is also fitted out to signal the following general alarms, if present:

- General alarm for incorrect electrical connection in the exchange contacts of: flow meter circuit valve, drain pump, jockey pump status.
- Fault in electrical connection in the exchange contact relative to panel 1 (electric pump/diesel engine pump)
- Fault in electrical connection in the exchange contact relative to panel 2 (electric pump/diesel engine pump)
- Jockey pump overload (\*).
- Jockey pump running(\*).
- Discharge pump overload (\*).
- Battery voltage low.
- Communications failure with ModBus system.

All the above conditions are visualised with signal LED's and on the display. The customer may decide to enable the buzzer.

The panel comprises a plastic casing (IP55), battery, battery charger, alarms and pump status display, if connected with 485 serial communication.

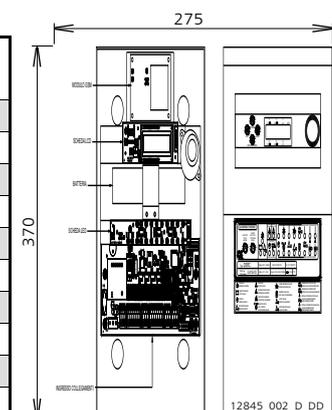

Fitted to transmit alarms for GSM or PC modules.

The fitter must make the electric connection between the contacts on the electric alarms control panel and other electric panels.

(\*). Check that the electric control panel combined with the electric pump is complete with dry contacts for pump running and overload signals.

### TECHNICAL SPECIFICATIONS

DESCRIPTION	VALUE
Input voltage (single-phase)	(1F+N) 230V +/-10%, 50-60 Hz
Absorbed	0,1A
Dimensions	370 x 275 x 160 mm
Protection grade	IP55
Battery	Al piombo ermetica
Rated battery voltage	12 Vcc
Rated battery capacity	2,3 Ah ( scarica in 20 h)
Dimensions of battery	178 x 34 x 66 mm
Sound emission levels	75dB
Control panel weight	1,5kg

## MULTI-QAL 12845 KIT

This is an electronic module (232/485 signal converter) required to realise systems with more than one QAL 12845 alarm panel (QAL for short) and to connect, if necessary, the QAL to an external supervision system. The communication and connection language between the QAL and the external supervisor is of the ModBus Standards RTU (9600/8/1/P) type and the connection is of the RS485 type. If more than one QAL is installed, the QAL connected to the electrical panels of the service pumps and auxiliary services, or to the Q-2Rils485, is identified as QAL MASTER and the Kit Multi-QAL module must be installed inside it. The QAL panels connected to the QAL MASTER are identified as QAL SLAVE modules. A system could comprise one QAL MASTER and up to a maximum of seven QAL SLAVE modules. An external supervision system must be connected to the Multi QAL Kit. This can be installed on the QAL if the system comprises just one QAL or on one of the QAL SLAVE modules.

Examples of system with QAL 12845 alarms management panel and connection to the external supervisor via the Multi-QAL electronic module kit (FIG.1)

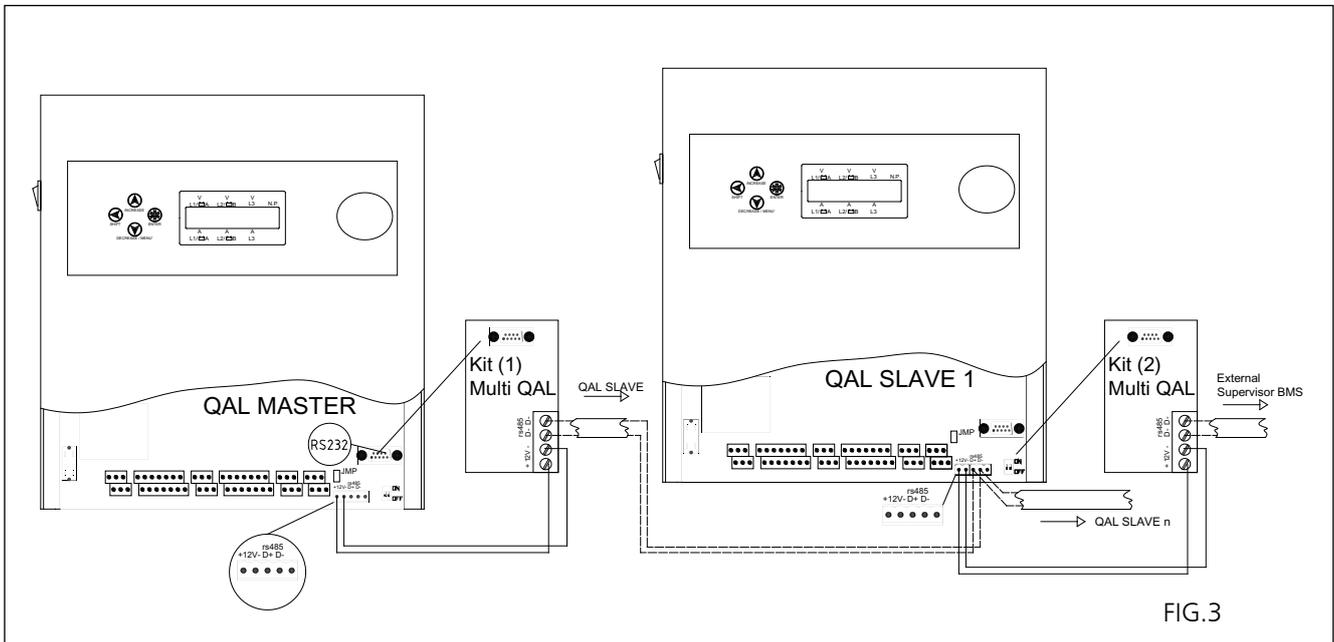

Examples of compound systems with more than one QAL 12845 alarms management panel via the Multi-QAL electronic module kit (FIG.2)

**ACCESSORIES**

Examples of compound systems with more than one QAL 12845 alarms management panel and connection to the external supervisor via the Multi-QAL electronic module kit (FIG.3)

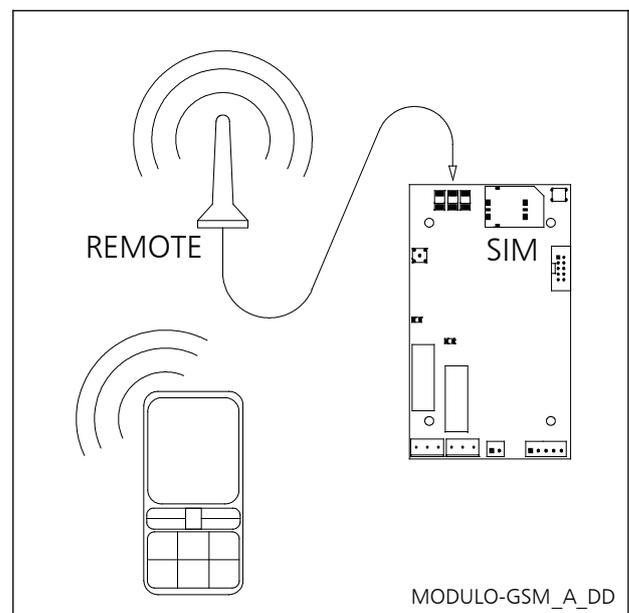

For other solutions, contact the technical assistance service.

## GSM MODULE KIT

This module can be directly fixed inside the QAL 12845 alarms management system and, depending on the type of installation, it can be used in two different ways:

- Basic applications, with the transmission of a single customisable alarm message if a contact closes or opens
- Application with serial communication (DB9 connector), for transmitting a series of coded messages (same messages shown on the QAL 12845 display) that can be read on a cell phone. In this case, the module also sends a "Communication down" message if communication is interrupted.
- Each message sent is replicated to all the set recipients.  
1 to 10 different recipients can be set.

The standard GSM module is fitted with a local magnetic aerial with a 5 m cable. Greater lengths are available on request.

## Q-2RILS 485 CONTROL PANEL

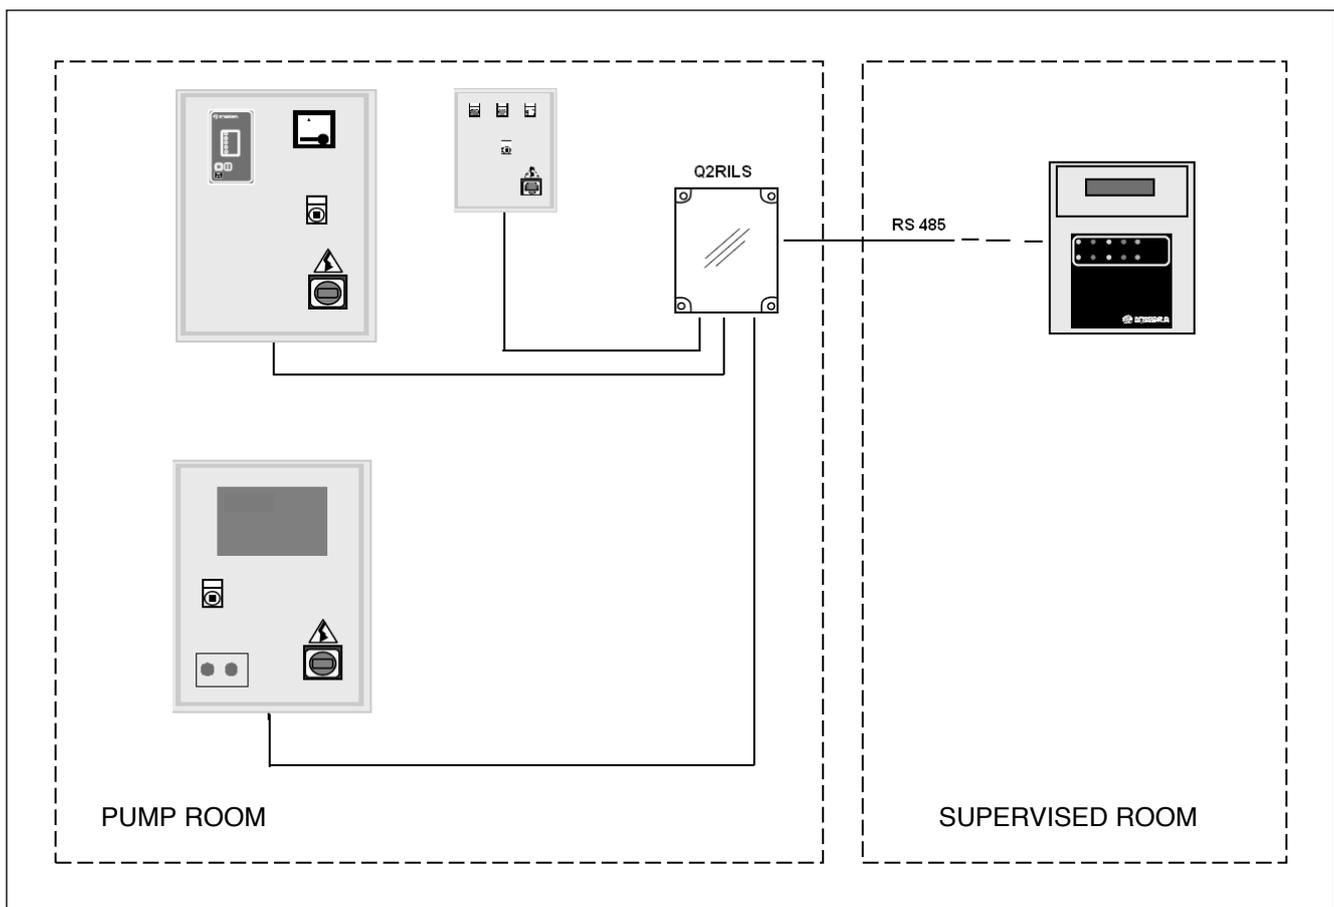

This is an accessory which converts the digital inputs in the room housing the Lowara pumping modules for EN12845 firefighting systems into ModBus-type 485 serial communications with two-pin wiring. Consistently with EN12845, the Q-2Rils 485 panel must be connected to the QAL 12845 alarms management panel located in the supervised room.

The Q-2Rils 485 panel contains:

- Main switch.
- Two digital– serial 485 conversion units.
- Electronic battery charger unit.
- Buffer battery 12Vdc.

The panel can manage sets with up to two service pumps, jockey pump and relative auxiliary devices, if present. The managed alarms are the same as those present in the QAL 12845 panel.

This solution eliminates all the cables, for each alarm, between the electrical panels of the electric service pump and diesel engine pump modules and the QAL 12845 alarms management panel. Installation benefits in the event of considerable distances between the pump room and the supervised room. Connection of the alarms of a typical system comprising: electric service pump module with jockey pump, diesel engine pump module.

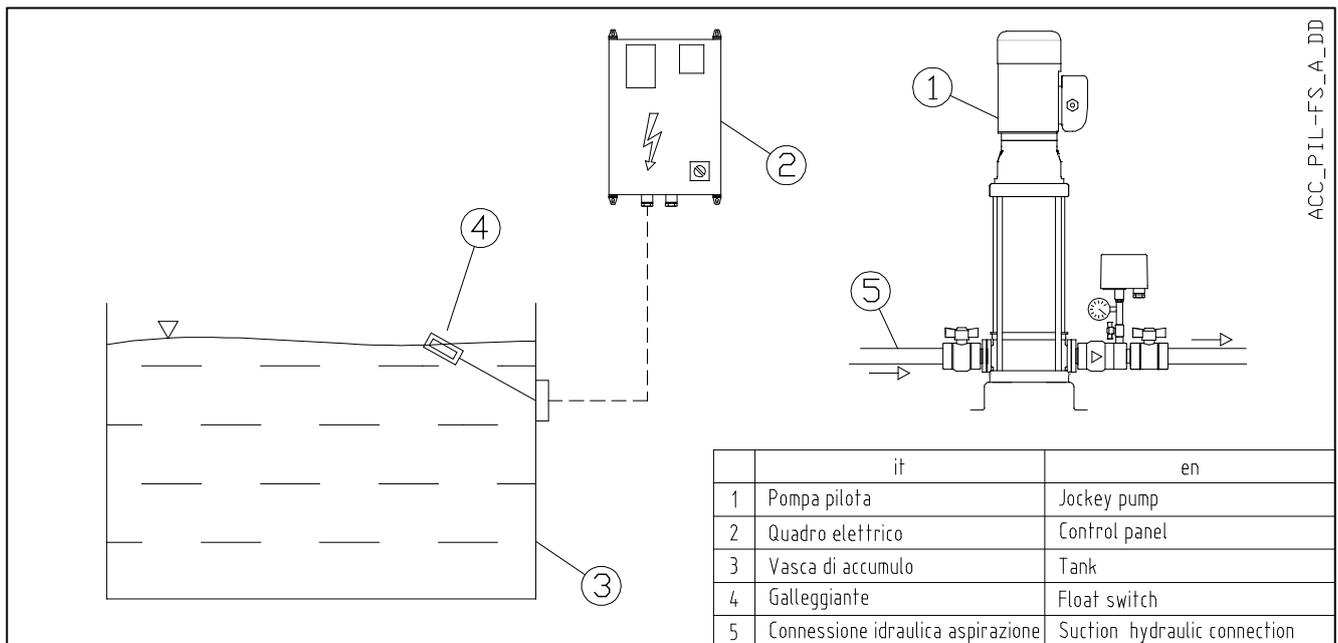

## PROTECTION SYSTEMS AGAINST DRY RUNNING FOR THE ELECTRIC JOCKEY PUMP

To avoid damaging the jockey pump, protection systems must be used to prevent it from dry running. The electric panel is fitted out for connection to a float switch or a minimum pressure switch. An optional level control module (available on request) allows three electrode probes to be connected in order to adjust sensitivity according to water hardness.

The individual characteristics of the three protection systems for the jockey pump are shown below.

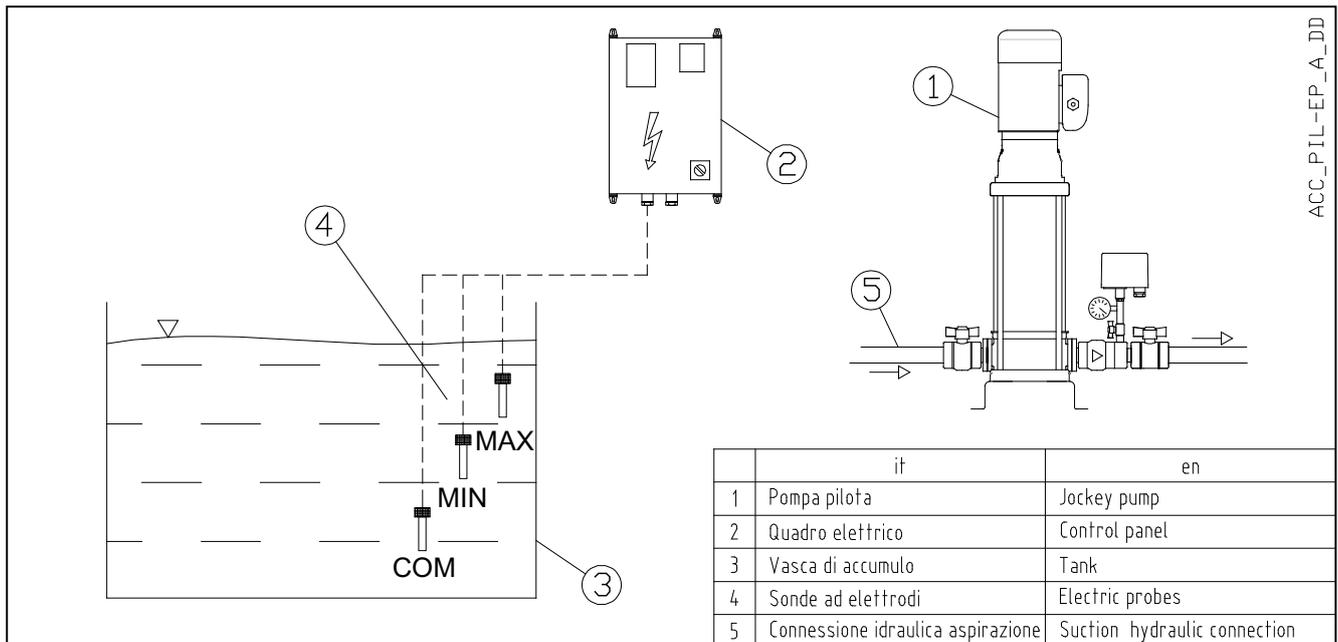

### FLOAT SWITCH PROTECTION

The system with float switches is used in suction lift or positive suction head installations with water supplies from storage tanks (basins). A float switch immersed in the basin is connected to the electric panel of the jockey pump. If there is no water, the float switch opens the electrical contact and the pump stops.

## ELECTRODE PROBE PROTECTION

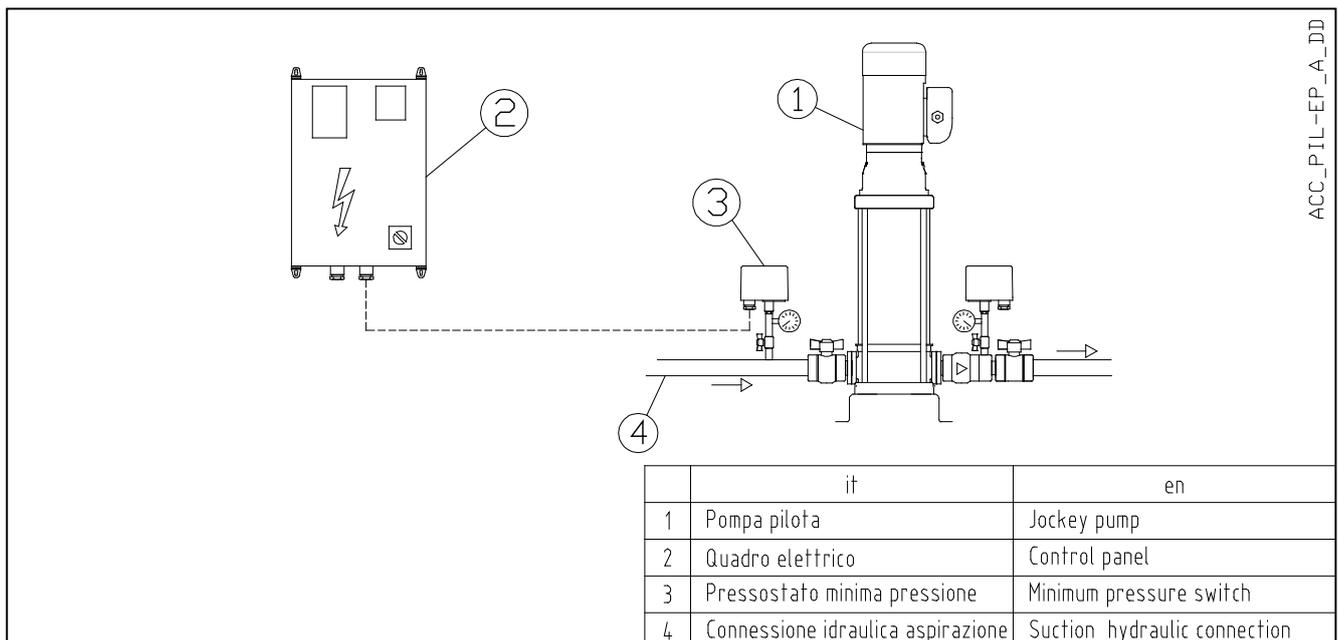

The system with electrode probes is used in suction lift or positive suction head installations with water supplies from storage tanks (basins). A set of three probes is connected directly to the electronic module (24V), also called level relay, which must be installed in the electric panel. With the three electrodes immersed in the water, the relay on the electronic board closes the contact and allows the pumps to start. If there is no water, the control circuit opens the electrical contact and the jockey pump stops.

ACC\_PIL-EP\_A\_DD

## MINIMUM PRESSURE SWITCH PROTECTION

The system with minimum pressure switch is used for water supplies from pressurised networks. The pressure switch is connected to the electric panel of the jockey pump. If there is no water, the pressure switch opens the electrical contact and the pump stops.

ACC\_PIL-EP\_A\_DD

**ACCESSORIES**

## DIAPHRAGM TANKS

The GEM pressure modules are fitted out to hold 24-litre diaphragm tanks, one for each pump. A 1" ball valve, suitable for connecting the tank, is also supplied with the module. Larger tanks can also be connected to the same ball valve. For proper sizing of the tank, please refer to the technical annex.

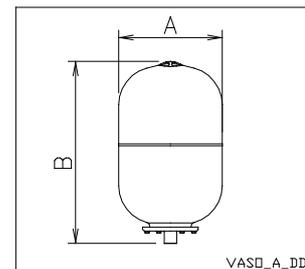

**Kits featuring the following accessories are available on request:**

- diaphragm tank.
- instructions sheet.
- packing.

## KIT OF UNIVERSAL BRACKETS FOR CONTROL PANELS

The electric control panels are supplied separately with 5 m of cable and can be mounted on the wall or on special brackets to secure to the floor.

A kit comprising two universal brackets and relative hardware for fixing the electric jockey pump panels and the electric service pump panels up to 55 kW is available on request. The electric control panels over 55 kW are freestanding cabinets.

**ACCESSORIES**

## **DIESEL ENGINE SPARE PARTS KIT**

EN 12845 at point 10.9.12 specifies that diesel engines must be provided with a series of tools as recommended by the engine manufacturer. In addition to these items it must be also provided with a set of spare parts.

Diesel engine spare parts kit contains:

- two transmission belt (if utilised).
- two filters with gaskets for fuel.
- two filters with gaskets for motor oil.
- a complete series of motor connections, gaskets and flexible pipes.
- two injector nozzles

## **DIESEL DISCHARGE VALVE KIT**

Diesel discharge valve kit contains an on/off ball valve which allows the discharge of the tank.

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect™

Xylect™ is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

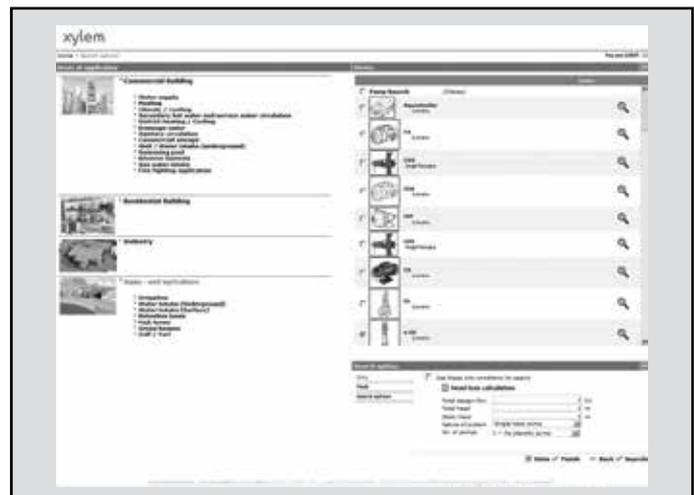

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty Point

Xylect™ gives a detailed output:

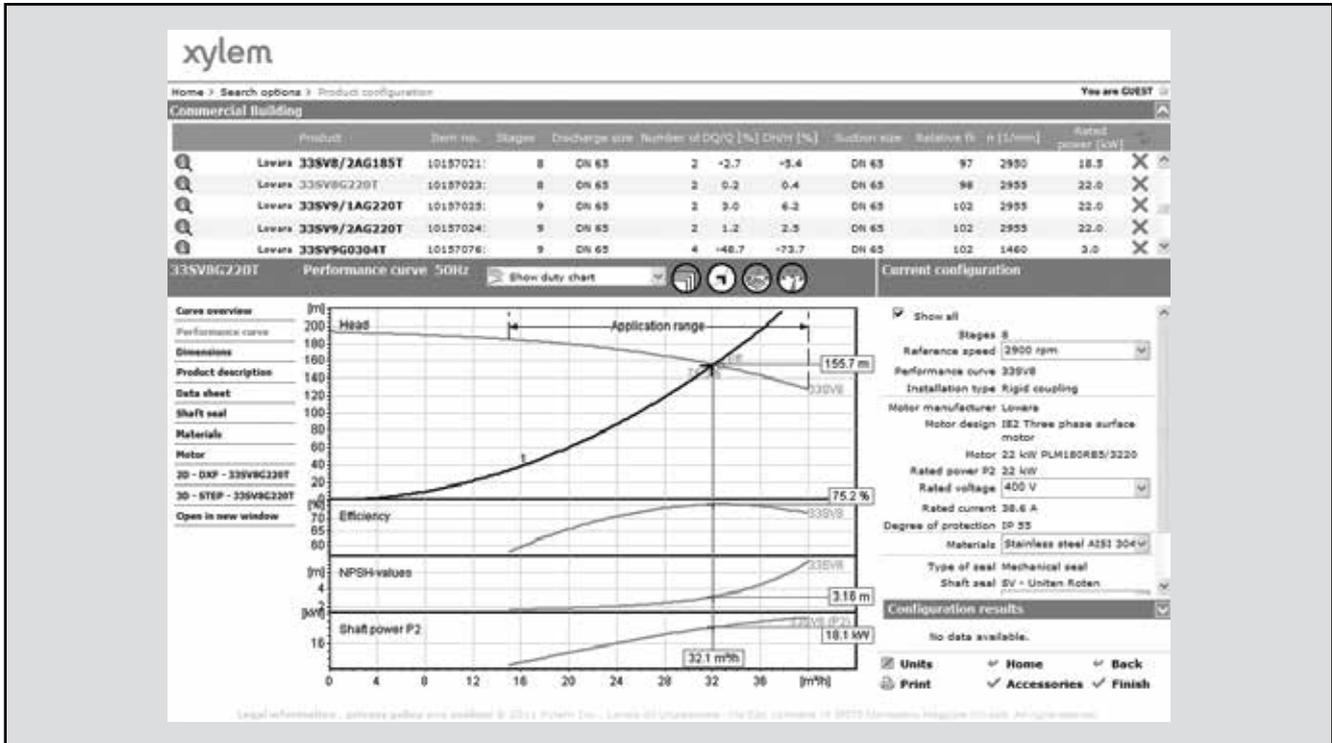

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect™

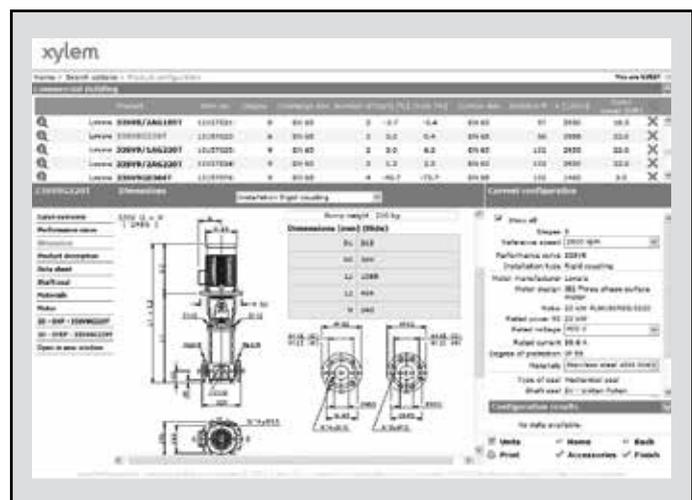

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect™ is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect™ users

Every user has a My Xylect space, where all projects are saved.

For more information about Xylect™ please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
